ACKNOWLEDGMENTS

We thank the United States Agency for International Development (USAID) for its support of this work.

Many people and organizations made this baseline survey possible.

We express our appreciation to the community women and household members who kindly participated in the surveys. We appreciate the support of the team members of the Improving Nutrition through Community Approaches (INCA) project—especially those on the leadership and evaluation teams. They provided the information and documents necessary to explain the project’s interventions and modalities and helped us understand the project’s context. Mitra and Associates conducted the survey in a highly efficient and professional manner, providing high-quality data processing and data editing and cleaning. We thank Mr. S. N. Mitra, Mr. Shahidul Islam, and other senior staff members for their efforts and dedication. We also thank Dr. Sian Curtis, of the USAID-funded MEASURE Evaluation project, who commented on the design and supported different stages of the survey.

The USAID mission in Dhaka provided financial support for this evaluation. We are grateful to Dr. Kanta Jamil, USAID’s senior monitoring, evaluation, and research advisor, for her continued assistance, support, and encouragement. She provided valuable and insightful suggestions at different stages of the design, and played a special role in developing the questionnaire. We thank Rashida Ijdi and Zunaid Ahsan for their assistance in the final stages of the report. And we are thankful to MEASURE Evaluation’s knowledge management team for editorial, design, and production services.

INTRODUCTION AND BACKGROUND

Purpose of the Baseline Survey

This document is the baseline survey report for the evaluation of the United States Agency for International Development (USAID)/Bangladesh's Improving Nutrition through Community-Based Approaches (INCA) activity. The evaluation is being conducted by the USAID-funded MEASURE Evaluation project at the request of USAID/Bangladesh, and is part of a larger set of monitoring and evaluation activities for the INCA project. INCA is a three-year effort to improve the nutritional status of women and children under age two in rural areas of 11 priority upazilas in the districts of Bhola, Laxmipur, and Noakhali. Caritas Bangladesh and United Purpose are implementing the project. It started in May 2017 and will be active through April 2020. Total funding is approximately USD\$4.4 million.

The 2017 baseline survey is the first of two surveys to assess the performance and impact of INCA. The overall objectives of this external evaluation are (1) to inform USAID and other stakeholders about project achievements in terms of changes in key outcomes and impact at the target population level; (2) to learn about the effectiveness of the specific INCA intervention for eventual replication in other areas of the country; and (3) to inform the follow-up of the project.

The evaluation is based on a prospective quasi-experimental difference-in-differences (DID) design to assess project impact using data collected through representative household surveys in INCA intervention and comparison areas in this baseline survey, and a follow-up endline survey that will be implemented by the end of 2019. MEASURE Evaluation also conducted a short community survey during this baseline assessment and will repeat it in the endline survey to assess changes in health and nutrition service availability.

Country Context¹

Global research has shown the importance of adequate nutrition during the crucial window of the first two years of life. Under-nutrition during this vital period impedes a child's progress to full cognitive, social-emotional, and motor development. Malnutrition is thus a leading cause of lifelong harm to productivity and earning potential. Adequate nutrition is fundamental to a country's development (Dewey, 2005).

Bangladesh has made significant progress in improving levels of nutrition in line with the Millennium Development Goals (MDGs): the prevalence of underweight children under five years of age declined from 52 percent in 1996 to 33 percent in 2014, exceeding the MDG target (Mitra, Al-Sabir, Cross, & Jamil, 1997; National Institute for Population Research and Training [NIPORT], Mitra and Associates, and ICF International, 2016). Moreover, the under-five mortality rate decreased to 46 per 1,000 live births in 2014, again exceeding the MDG target of 48 per 1,000 live births (NIPORT, et al., 2016). During this period, evidence from USAID and other donor-funded programs suggests that there have been reductions in stunting and the underlying causes of malnutrition in specific areas of Bangladesh in which those interventions exist. Estimates indicate that there was a 14.4 percent reduction in childhood stunting from 2011 to 2014 across the two major divisions (Barisal and Khulna) in which Feed the Future (FTF) programs were concentrated.

¹ This section is based on material presented in Chapter 2 of the INCA Monitoring, Evaluation and Learning Plan (Caritas, 2017).

However, despite this notable progress, the overall state of malnutrition among children and women in Bangladesh remains high. The 2014 Bangladesh Demographic and Health Survey (BDHS) found that although reduced from previous years, stunting was still high, at 36 percent; that 14 percent of children under five years of age were wasted; and that 13 percent of ever-married women were below 145 centimeters (cm) in height (NIPORT, et al., 2016).

Complementary feeding from six months of age is known to be critical for adequate nutrition and for optimum growth and child development. Ensuring the diversity and quality of complementary food is one of the most cost-effective strategies for improving health and increasing survival in young children (Dewey, 2005). Unfortunately, the diversity of food is not sufficient in Bangladesh. The 2014 BDHS found that only seven percent of children ages six to eight months were receiving World Health Organization (WHO) recommended infant and young child feeding (IYCF) practices (including being given milk or milk products, food from the recommended food groups, and fed with minimum frequency), and that overall, only 23 percent of children ages six to 23 months were receiving appropriate IYCF practices. Indeed, the 2014 BDHS found that IYCF practices had barely changed, increasing by only two percentage points since 2011 (NIPORT, et al., 2016).

As might be expected, ensuring adequate nutrition is most likely to be challenging in the harder-to-reach areas of the country. Three such areas are Bhola, Laxmipur, and Noakhali Districts. These three districts are situated in south-central Bangladesh, bordering the Bay of Bengal and bifurcated by the Meghna River. These districts contain *chars* (the term used in Bangladesh for riverine islands). In these districts, the chars are unstable sandbanks in the Meghna River, largely occupied by landless communities. Government services are typically harder to reach by those living on these chars, leaving many there without access to healthcare. Several upazilas in these districts are also very detached from the district administrative headquarters and have very poor communication. The isolation of communities, especially on the chars, also means that awareness is likely to be low, and negative cultural practices, such as discarding colostrum milk, are likely to prevail.

Data gathered from previous surveys indicate that these districts do indeed have worse malnutrition than many other parts of the country. A large multicluster survey in 2012–2013 showed a 49.4 percent stunting level in Bhola, a 45.4 percent stunting level in Laxmipur, and a 49.1 percent stunting level in Noakhali. The levels of underweight and wasting were also severe in these districts. In Noakhali, a wasting level of 16.1 percent was found, putting it in the “critical” category according to WHO standards (Government of People’s Republic of Bangladesh, 2014). The high level of stunting in these districts is an indication of chronic malnutrition and suggests that an intervention to improve nutritional and health outcomes is needed in these hard-to-reach areas.

Project Description

The USAID-funded INCA project aims to address the high levels of stunting and malnutrition in 11 selected upazilas in the districts of Bhola, Laxmipur, and Noakhali in Bangladesh. The project is being implemented by Caritas Bangladesh as the lead organization, with United Purpose as the technical partner. The project is a three-year activity, effective from May 15, 2017 to May 14, 2020. The targeted upazilas have an estimated total population of 3,004,228² with about 106,420 pregnant women and 100,407 live births in 2015. Using the 49

² According to the INCA project MEL Plan document.

percent stunting level identified in the 2012–2013 multicluster survey as a reference point, at any given time there are approximately 150,000 “1,000-day households” that are at risk and need special care and support. The INCA project was designed by USAID/Bangladesh to improve nutritional practices during the crucial first 1,000 days of life, from conception to age two, to prevent irreversible stunting in children.

According to the INCA results framework, the project objective of improving nutritional practices will be achieved through two intermediate results (IRs):

- IR1: Improved knowledge of communities on proper nutritional requirements during the first thousand days of life.
- IR2: Increased access to and use of health and nutrition services at community-based health facilities.

To achieve these results, the INCA project uses an intensive and integrated intervention approach that pivots around a core of 401 Community Nutrition Promoters (CNPs) in the intervention upazilas. The CNPs coach pregnant women and mothers of children under age two, and facilitate linking women and communities with health facilities (community clinics [CCs], Family Welfare Centers [FWCs], Upazila Health Complexes [UHCs], and Smiling Sun clinics) located in the areas covered by the CNPs. INCA trains and support the CNPs to first identify all 1,000-day households in their catchment areas, and then to implement several gender-sensitive nutrition education and information services in their communities with strong linkages to the CCs, FWCs, and UHCs. Examples of interventions being implemented by the CNPs are monthly household visits to the identified 1,000-day households for one-on-one counseling on diet and IYCF counseling and care; distribution of nutrition materials, such as the Food Plate; the pregnancy calendar; counseling on immunizations and child feeding; quarterly nutrition day events in the communities; and weekly group courtyard counseling sessions, including cooking demonstrations at the Women Information Centers (WICs) through the local service providers.

INCA trains personnel at government health facilities to increase staff knowledge of nutrition and ensure that nutrition services are mainstreamed in all health service delivery activities. INCA is also building the nutrition skills of selected members of existing clinic-based support groups (CSGs) to act as nutrition focal points and to develop Community Nutrition Support Groups (CNSG). Moreover, it is working to better integrate nutrition with other maternal and child health (MCH) activities.

One innovative element of the intervention is the development of a dashboard and mobile app that will enable CC health practitioners and CNPs to quickly identify and target at-risk women and children, coordinate support measures, and facilitate referral and linkages with other relevant service providers. The mobile dashboard will also be used to monitor the activities of the CNPs and to generate reports based on the management information system.

INCA is establishing 40 WICs in remote and underserved locations that are owned and managed by trained female informal health practitioners and other service providers. The WICs will develop into one-stop service centers and will be linked to the CNPs and CCs through the dashboard and mobile app. These two innovative elements are expected to provide last-mile outreach and add to the quality, efficiency, and sustainability of nutrition services in the targeted communities.

Evaluation Questions

The objectives of the evaluation are to examine the achievement of project results and to estimate project impact at the population level. Following are the main evaluation questions:

1. Has stunting among children under age two declined in INCA project areas?
2. Has knowledge about nutritional requirements improved among household members in project areas?
3. What changes in nutrition-related practices have occurred in project areas?
4. What changes in the use of health facilities for nutrition services have occurred in project areas?
5. For these four questions, MEASURE Evaluation will examine whether the observed changes varied by geographic location in the project areas.
6. Did the INCA project have any impact on reducing stunting among children under age two?
7. Did the INCA project have any impact on improving knowledge among community members in target areas?
8. Did the INCA project have any impact on nutrition-related practices?
9. Did the INCA project have any impact on the use of facilities for nutrition services?
10. For these four questions, MEASURE Evaluation will examine whether project impact varied by geographic location in the project areas.

Given that the INCA intervention area is composed of a heterogeneous group of upazilas in terms of nutritional status, behaviors, and practices, and in the presence of previous nutrition programs, it was considered likely that the INCA project would generate different changes and impact in different upazilas. To examine the differential impact by geographical location, we identified two intervention areas in INCA:

- **INCA intervention area 1 (INCA 1)**, comprising seven upazilas in Bhola district: Bhola Sadar, Daulatkhan, Burhanuddin, Tazumaddin, Lalmohon, Char Fasson, and Manpura
- **INCA intervention area 2 (INCA 2)**, comprising four upazilas in Laxmipur and Noakhali districts: Kamalnagar, Ramgati, Subarnachar, and Hatiya

We selected these two intervention areas because the upazilas covered in INCA 1 and INCA 2 are distinctly different in terms of geographical, socio-demographic, and cultural contexts. For example, INCA 1 is in Barisal division and INCA 2 is in Chittagong division. People in Chittagong division are known to have more conservative outlooks and have higher fertility and child mortality than in Barisal division (NIPORT, et al., 2016). However, child malnutrition, as measured by stunting and wasting, is slightly higher in Barisal than in Chittagong. Most upazilas in INCA 1 are islands or chars mostly surrounded by water. By contrast, upazilas in INCA 2 often have only one border with the sea. These two intervention areas were also different in terms of the presence of previous nutrition programs. In particular, Bhola district (INCA 1) was part of the FTF intervention area, whereas INCA 2 was not.

Key indicators to be examined are those directly related to INCA's interventions and will focus on individuals' practices and knowledge about nutrition during the first 1,000 days of life, from pregnancy care to child feeding, and on access to and use of maternal and child health and nutrition services.

Evaluation Design

The INCA assessment has two components: a performance or outcome evaluation, and an impact evaluation.

Performance Evaluation

The performance evaluation seeks to answer evaluation questions 1, 2, 3, 4, and 5. To that end, changes in key population-level outcome indicators that occurred between the start and the end of the project, from 2017 to 2019, will be measured and examined. The key indicators are:

- Prevalence of stunting among children under age two.
- Nutrition-related practices and knowledge indicators from the INCA results framework.
- Indicators on access to and use of MCH and nutrition services from the INCA results framework.
- Additional indicators that measure household and individual conditions, and behaviors that influence health and nutritional status, practices, knowledge, and use of MCH and family planning services.

The list of indicators is consistent with those in the INCA results framework and was agreed to with USAID/Bangladesh and the project implementing agencies.

The data will be collected through the baseline household survey and an endline household survey using representative samples of the INCA target population. Two domains will be included in the sample to obtain representative estimates for INCA 1 and INCA 2 (described above). The baseline survey was conducted in the second half of 2017, just before INCA interventions were implemented in the field. The endline survey will be conducted in the second half of 2019.

The household surveys use questionnaires, data collection protocols, and data management procedures similar to those of the BDHS to ensure comparability of results with national and division-level estimates. The indicators use the same definitions as the BDHS or the FTF Population Based Survey.

Results from the 2017 household survey, presented in this report, establish baseline values for the key indicators, and provide a profile of the project target population in terms of demographic, socioeconomic, health, nutrition, and health-care seeking behavior characteristics.

Results from the 2019 endline survey will allow for the measurement of changes relative to the baseline. Changes will be examined through statistical tests of the difference of means using regression models to better control for clustering generated by the multistage sampling selection process. P-values will allow for a determination of the statistical significance of the changes observed. Mean differences will be examined for the overall INCA target area and for INCA 1 and INCA 2.

Impact Evaluation

The impact evaluation seeks to answer evaluation questions 6, 7, 8, 9, and 10. The evaluation strategy is based on a prospective, quasi-experimental, DID impact estimation design, using a matched comparison group and community fixed-effects controls. This design estimates program impact by comparing changes in the INCA program group between baseline (2017) and endline (2019) to changes in the comparison group over the same time period, controlling for community-level differences between the groups and for other differences in

household characteristics. To implement this design, the baseline and endline surveys will need to be conducted in the same communities or clusters; in other words, the surveys will be longitudinal at the cluster level.

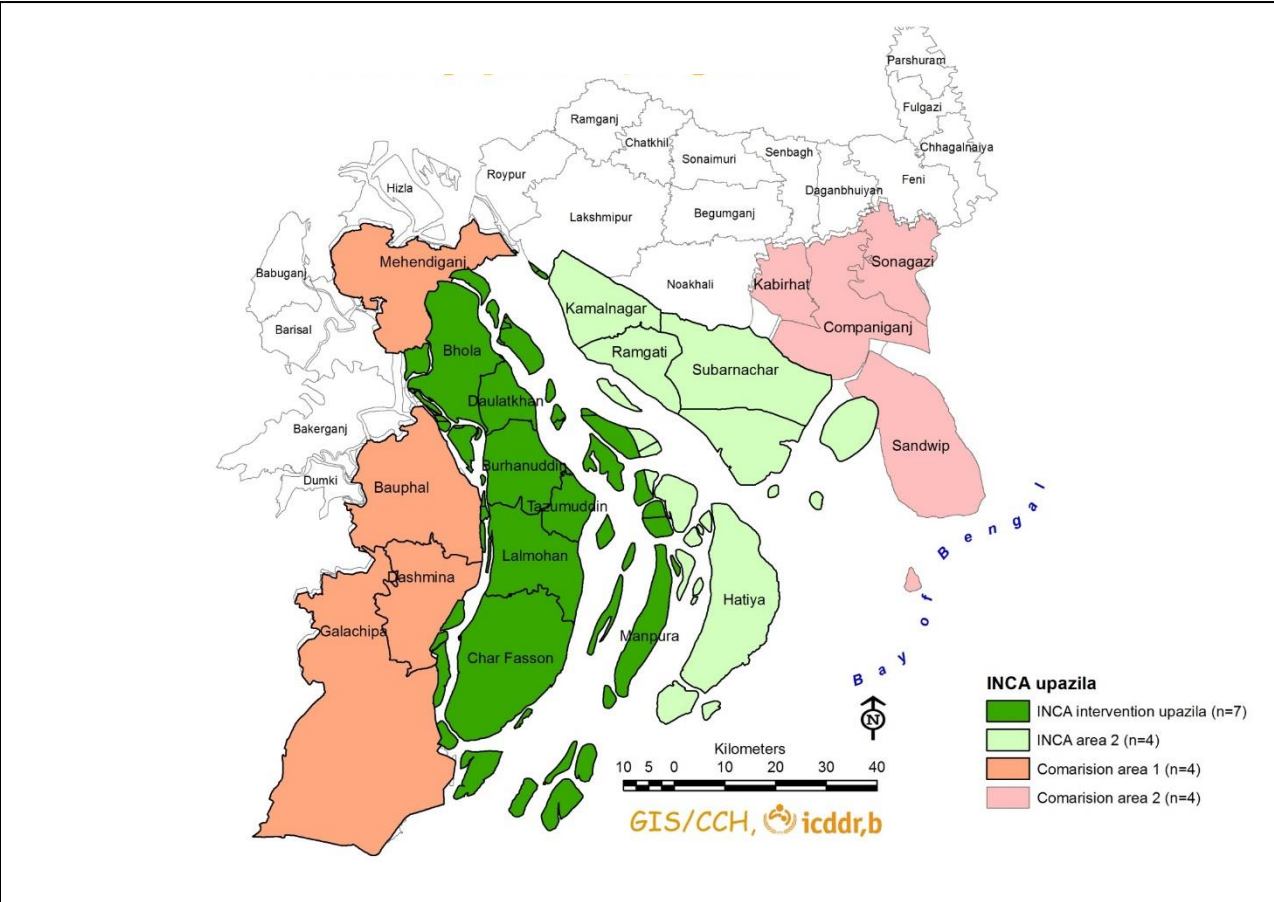

The validity of the estimates obtained by this design depends on what is referred to as the “parallel trends assumption,” which means that we assume that the comparison group provides a good approximation of the change that would have happened in the INCA program group if the program had not been implemented.

To find an appropriate comparison group, demographic, socioeconomic, health, and nutrition characteristics of neighboring communities, where INCA is not operating, were examined to find the best match to the INCA target areas. Because there are other ongoing projects to improve nutrition in the INCA and surrounding areas, this information was also considered. Following consultations with researchers knowledgeable about the areas and with USAID/Bangladesh, comparison areas were selected as follows:

- **Comparison area 1 (Comparison 1)**, comprised of four upazilas in Barisal and Patuakhali: Mehendigani, Bauphal, Dashmina, and Golachipa.
- **Comparison area 2 (Comparison 2)**, comprised of four upazilas in Noakhali, Feni, and Chittagong: Kabiehat, Companiganj, Sonagazi, and Swandeeep.

Once the endline survey is conducted, project impact will be estimated using DID regression models applied to the baseline and endline pooled data. The models will include controls for household and individual characteristics, and for fixed effects at the cluster level to account for unobserved time-invariant characteristics on which program and comparison communities differ. The models will be estimated using corrections of standard errors for the clustering generated by the multistage sampling design. Project impact will be estimated for the INCA project as a whole and for INCA 1 and INCA 2.

Figure 1. Map of upazila areas, by intervention and comparison areas, Bangladesh INCA project

Sample Design for the INCA Baseline Survey

The INCA target population are women with children under age two and currently pregnant women living in rural areas in all seven upazilas of Bhola district and in the adjacent four upazilas of Laxmipur and Noakhali districts.

The baseline survey had four domains/strata, as follows:

1. **INCA intervention area 1 (INCA 1)**, comprised of seven upazilas in Bhola district: Bhola Sadar, Daulatkhan, Burhanuddin, Tazumaddin, Lalmohon, Char Fasson, and Manpura.
2. **INCA intervention area 2 (INCA 2)**, comprised of four upazilas in Laxmipur and Noakhali districts: Subarnachar, Hatiya, Kamalnagar, and Ramgati.
3. **Comparison area 1 (Comparison 1)**, comprised of four upazilas in Barisal and Patuakhali districts: Mehendiganj, Bauphal, Dashmina, and Golachipa.
4. **Comparison area 2 (Comparison 2)**, comprised of four upazilas in Noakhali, Feni, and Chittagong districts: Kabichat, Companiganj, Sonagazi, and Swandeeep (Figure 1).

Because the primary focus of the INCA project is to improve the nutritional status of children under two years of age, we used the prevalence of stunting among children under two years as the indicator for the calculation of sample size. A separate representative sample of currently pregnant women was also selected to study the indicators on knowledge and practice of antenatal care (ANC) and minimum acceptable diet. The sample size was selected to be sufficiently large to detect the expected changes in the key indicators, with 95 percent confidence and 80 percent power, as indicated in Table 1. On the basis of previous surveys, the design effect was estimated to be 1.5 and the response rate was expected to be 10 percent for mothers with children under the age of two, and 15 percent for pregnant women. In Table 1, we present the key indicators and the sample sizes required in each strata to provide estimates in that strata.

Table 1. Target populations, expected changes in key indicators, and required sample sizes, INCA baseline survey, 2017

Indicators*	Target population	Baseline	% change	Endline	Sample size
Stunting among children under two	Women with a child under age 2	28.0%	5 percentage points	23.0%	1,942
Specific knowledge about MAD**	Currently pregnant women	30.0%	Change of 6.1 percentage points	36.1%	1,499
Specific knowledge about MAD**	Currently pregnant women	30.0%	Change of 7.5 percentage points	37.5%	1,006
<p>* Baseline indicators are from the 2014 BDHS in Barisal/ rural areas, the 2015 FT project and the Shika Project. In the absence of reasonable estimates of baseline and endline values in the comparison domains, we assumed similar values.</p> <p>** MAD: Minimum acceptable diet</p>					

The sample size estimates in Table 1 show that for stunting, a sample size of 1,942 (adjusted for design effect and non-response) was required to detect the difference between baseline and endline values, with 95 percent confidence and 80 percent power, in each domain of the INCA and comparison areas. Thus, a total of at least $1,942 \times 4 = 7,768$ women with a child under two years of age needed to be selected.

The baseline survey was conducted on a representative sample of pregnant women and women with children under age two living in the INCA target areas and in the comparison areas. The sample was selected using a two-stage random selection procedure. In the first stage, 65 clusters were randomly selected from the sampling frame of mouzas in rural areas in each of the INCA target upazilas and comparison areas. Given the two intervention areas and the two comparison areas, a total of 260 clusters were selected. In each of the selected clusters, a household listing was conducted to identify households with either pregnant women or women with children under the age of two (these were the eligible households). A complete list of the target population (women with a child under two years and/or pregnant) was prepared and served as the sampling frame for the second stage sampling. Using data from the 2014 BDHS, we assumed that one in six households would have a mother with a child or children under two years of age residing in it. Therefore, a cluster size of 300 households would have, on average, 50 households with a mother of a child or children under two years of age. Thirty households with a mother of a child or children under two years of age were randomly selected from the estimated 50 households having one or more mothers with children under two years of age. For pregnant women, it was estimated that one in fifteen households would have a pregnant woman residing in it. In the second stage, a sample of households was randomly selected from the list of eligible households in each selected cluster. All women who were either pregnant and/or had children under the age of two in the selected households were interviewed.

Altogether, 7,800 mothers with a child under two years of age from 260 clusters were selected. For pregnant women, we randomly selected 12 currently pregnant women per cluster from INCA intervention areas and eight from comparison areas. In sum, 2,600 currently pregnant women from 260 clusters were selected. The specific sample sizes (total number of clusters and total number of respondents) required for the survey are given in Table 2.

Table 2. Sample sizes in each stratum, INCA baseline survey, 2017

Domains	No. of clusters	Women with children under two	Pregnant women
1. INCA 1	65	1,950	780
2. INCA 2	65	1,950	780
3. Comparison 1	65	1,950	520
4. Comparison 2	65	1,950	520
Total	260	7,800	2,600

Implementation of the Survey

The 2017 baseline survey was implemented by Mitra and Associates, a research firm based in Dhaka, Bangladesh. MEASURE Evaluation, a USAID-funded project implemented by the Carolina Population Center at the University of North Carolina at Chapel Hill, provided technical assistance for the survey.

Survey Instruments

The 2017 baseline survey was designed to measure key health-related indicators at the individual and community levels and used five different survey instruments. Interviews were conducted at the community, household, individual, and facility levels in the selected project intervention and comparison areas. The main data for the survey were collected from currently married women of reproductive age (15–49) with children under two years of age and pregnant women. The five survey instruments were (See Appendix C):

1. *Screening Questionnaire*: The screening questionnaire was used to determine the categories of eligible respondents (all currently married women ages 15–49 with a child[ren] under two years or all currently married pregnant women) to be sampled for the household and women’s surveys. It was administered during the household listing operation to a female person in the sampled household who was capable of answering the questionnaire.
2. *Community Questionnaire*: This was administered to four to six knowledgeable community leaders and to key informants in the sampled areas at the time of the household listing operation. It was designed to collect information on the location and availability of different health services, especially of nutrition-related services, the presence of other nutrition-related projects, and the characteristics of the community. The community questionnaire was completed during the household listing operation and took approximately 15 minutes to complete.
3. *Household Schedule and Questionnaire*: This was administered to the female head of household. It was designed to capture the physical, demographic, and socioeconomic characteristics of the household. The questionnaire took approximately 10 minutes to complete.
4. *Women with Children Under Two Questionnaire*: This was administered to all currently married women ages 15–49 with a child(ren) under two years in the sampled households. It captured background characteristics, birth history, use and knowledge of health services (contraception, ANC, postnatal care [PNC]), knowledge of key nutritional practices, feeding patterns, and hand washing. The questionnaire took approximately 30 minutes to complete. The questionnaire included an *Anthropometry for Child* component, which was administered to all children under two years of age in the sampled households. This part took approximately 10 minutes to complete.
5. *Pregnant Women Questionnaire*: This was administered to all currently married pregnant women in the sampled households. It captured the same information as the women’s questionnaire, and knowledge about health and nutrition practices during pregnancy. The questionnaire took approximately 30 minutes to complete. The questionnaire included an *Anthropometry for Pregnant Women* component, which was administered to all pregnant women in the sampled households. It captured weight and height information and took 10 minutes to complete, on average.

Training and Fieldwork

Household Listing

The household listing was conducted through pretesting, recruitment of household listing interviewers, training, and fieldwork for the household listing. The steps carried out for household listing were:

Pretesting

A draft household listing form and screening questionnaire for the survey were developed by MEASURE Evaluation and Mitra and Associates in June 2017. Mitra and Associates translated the listing questionnaires from English into Bangla, then jointly finalized the instruments. A pretest training was conducted on July 8, 2017 for interviewers selected for the pretesting. After successful completion of the pretest training, the pretest team completed the pretesting on July 9, 2017. Quality control members from MEASURE Evaluation accompanied the pretest teams to observe the household listing and mapping procedures. Based on the pretest experiences, MEASURE Evaluation and Mitra and Associates then jointly finalized the instruments.

Recruitment, Training, and Fieldwork for the Listing

The recruitment for household listing interviewers took place on July 6, 2017. A total of 76 field personnel were recruited for the listing through the recruitment process of Mitra and Associates. An extensive training for the listing teams was facilitated by experienced trainers from Mitra and Associates and was conducted from July 16 to July 23, 2017. Local representatives of MEASURE Evaluation attended the training as resource persons and to observe the training. The listing teams were instructed on the listing procedures during the training process. A full day of field practice was conducted on July 19, 2017 in rural areas near Dhaka city, as a part of the training process.

The household listing fieldwork was carried out over a period of three months and in three phases, from July 24, 2017 to October 30, 2017. Listing fieldwork for the INCA survey was carried out by interviewing teams, consisting of seven members, including one male supervisor, five female interviewers, and one logistical assistant. Four Quality Control Officers were sent to the field to oversee the household listing work. The number of teams declined with each subsequent phase, starting with ten teams in the first phase, and ending with five teams by the end of the listing work.

Coverage of Household Listing

A total of 79,197 households were listed during the household listing operation from all 260 clusters in the survey, including 39,615 households from the clusters of INCA target upazilas and 39,582 households from the clusters of comparison areas. On average, 304 households were listed from each INCA project and comparison cluster.

Community, Household, and Women's Questionnaires

The household and women's surveys were conducted through pretesting, recruitment of interviewers, training, and fieldwork. The steps carried out for this part of the survey were:

Pretesting

A pretest training was conducted from September 17 to September 18, 2017 for interviewers selected to conduct the pretesting. After the successful completion of the pretest training, the pretest team pretested the questionnaires from September 19 to September 20, 2017, in Savar upazila of Dhaka district. Based on the pretest experiences, MEASURE Evaluation and Mitra and Associates then jointly finalized the instruments.

Fieldwork and Training

A total of 107 field personnel were recruited for the data collection. An extensive training for the data collection teams was conducted by experienced trainers from Mitra and Associates from September 20 to October 11, 2017. The local representatives of MEASURE Evaluation attended the training as resource persons. The data collection teams were taught the complete data collection procedures, step by step, during the training process. An important part of the training was two days of field practice, conducted on September 28, 2017 and October 4, 2017, in the rural areas of Savar upazila of Dhaka district.

Field data collection for the baseline survey was carried out over a period of three months, from October 12, 2017 to January 4, 2018. Thirteen interviewing teams, each consisting of eight members, including one male supervisor, one female editor, five interviewers, and one logistics assistant, were sent to the field to complete the data collection. Eight Quality Control Officers were sent out to conduct quality control in the field. Local representatives of MEASURE Evaluation also monitored the fieldwork through field visits. A debriefing session was held after completing each phase. Problems encountered in the field, clarifications, and administrative matters were discussed during the debriefing session.

Data Processing

Four data entry operators were employed to enter data from the questionnaires into the computer. In addition to the data entry operators, one data entry supervisor was employed to oversee the work of the operators. The data entry work started on November 26, 2017 and was completed on February 6, 2018. The task was carried out using the Census and Survey Processing System, a software jointly developed by the United States Census Bureau, ICF International, and Serpro S.A. To minimize error, a double data entry procedure was followed.

Response Rates

The household response rates exceeded 99 percent in the INCA and comparison areas. The response rates of eligible mothers with children under two were 89.5 percent or higher. The lowest response rate was for pregnant women in the comparison areas, where 84.3 percent of pregnant women in Comparison 2 responded to the survey. The response rates for pregnant women in INCA areas were higher than the response rates for pregnant women in the comparison areas, with 95 percent of pregnant women responding in the INCA areas. The response rates are presented in Table 3.

Table 3. Number of households, number of interviews, and response rates, according to domain (unweighted), INCA baseline survey, 2017

Result	INCA intervention areas			Comparison areas		
	INCA 1 ³	INCA 2 ⁴	Total INCA	Comparison 1 ⁵	Comparison 2 ⁶	Total comparison
Household interviews						
Households selected	2,980	2,974	5,954	2,762	2,756	5,518
Households occupied	2,908	2,905	5,813	2,676	2,658	5,334
Households interviewed	2,899	2,892	5,791	2,661	2,648	5,309
Household response rate ¹	99.7	99.6	99.6	99.4	99.6	99.5
Interviews with mothers of children under two						
Number of eligible women	2,207	2,186	4,393	2,032	2,129	4,161
Number of eligible women interviewed	2,093	2,073	4,166	1,864	1,905	3,769
Eligible mothers response rate ²	94.8	94.8	94.8	91.7	89.5	90.6
Interviews with pregnant women ages 15–49						
Number of eligible women	522	620	1,142	420	477	897
Number of eligible women interviewed	483	575	1,058	368	402	770
Eligible pregnant women response rate ²	92.5	92.7	92.6	87.6	84.3	85.8
¹ Households interviewed/households occupied. ² Respondents interviewed/eligible respondents. ³ INCA 1: seven upazilas in Bhola district (Bhola Sadar, Daulatkhan, Burhanuddin, Tazumaddin, Lalmohon, Char Fasson, and Manpura). ⁴ INCA 2: Four upazilas in Laksmipur and Noakhali districts (Subarnachar, Hatiya, Kamalnagar, and Ramgati). ⁵ Comparison 1, comprised of four upazilas in Barisal and Patuakhali (Mehendiganj, Bauphal, Dashmina, and Golachipa). ⁶ Comparison 2, comprised of four upazilas in Noakhali, Feni, and Chittagong (Kabiehat, Companiganj, Sonagazi, and Swandeeep).						

Comparability of Areas

To assess the similarities, or balance, between the intervention and comparison areas, we conducted tests of differences between means of the groups. We used linear regression models corrected for clustering applied to 53 household-level indicators, 22 indicators for mothers with children under age two, and 22 indicators for pregnant women. The complete set of balance test tables is presented in Appendix B, but a summary of the results is presented in Table 4. As shown, the degree of similarity between the areas was low. Given that the comparison groups were obtained using limited information about the areas, these results are not surprising.

The results indicated the need to use appropriate methods to control for pre-existing differences between the intervention and comparison groups during the estimation of program impact, which we will do by using a DID with fixed effects estimation model.

Table 4. Summary of balance tests, INCA baseline survey, 2017

Domains	Number of indicators tested	Number of indicators that are significantly different between the intervention and comparison areas	Percent
INCA total			
Household characteristics	53	33	62.3
Mothers with children under two	22	17	77.3
Pregnant women	22	11	50.0
INCA 1			
Household characteristics	53	25	47.2
Mothers with children under two	22	3	13.6
Pregnant women	22	2	9.1
INCA 2			
Household characteristics	53	41	77.4
Mothers with children under two	22	17	77.3
Pregnant women	22	14	63.6

FINDINGS

The full set of tables are provided in Appendix A. In the next sections, we present the key findings from the analysis of the household and women's questionnaires.

Household Characteristics

Key findings from the analysis of the household characteristics were:

- Twenty point nine percent (20.9%) of households in the INCA areas were headed by a woman. Households were slightly more likely to be headed by a woman in INCA 2 and Comparison 2. Comparison 2 had the largest percentage of households headed by women (33%) (Table A2).
- The mean household size in the INCA areas was five point four people (5.4). The average household size was slightly larger in INCA 2 (5.5) than in INCA 1 (5.2). Similarly, Comparison 2 had a larger mean household size (5.7) than did Comparison 1 (5.1) and INCA 2 (5.2) (Table A2).
- The mean age of household members was slightly larger in INCA 1 than in INCA 2 (23.2 years and 21.7 years, respectively) (Table A2a).
- INCA 2 had the lowest proportion of households with electric or solar power (72.3%), which was significantly lower than the proportion of households with access to electric or solar power in Comparison 2 (90.5%) (Table A3).
- Comparison 1 had a significantly higher proportion of households that cooked outdoors (13.3%), compared with INCA 1 (7%). On the other hand, INCA 2 had a slightly higher proportion of households that cooked outside (11.5%) compared with Comparison 2 (8.4%) (Table A4).
- Access to improved sources of water was very high and comparable in all intervention and comparison areas (Table A5).
- Almost all households in the intervention and comparison areas did not treat their water before drinking (Table A5).
- Approximately one percent of households in the intervention areas were using the appropriate method to treat their water, whereas zero point three percent (0.3%) of households in Comparison 1, and one point five percent (1.5%) of households in Comparison 2 were using the appropriate method to treat their water (Table A5).
- A higher proportion of households in INCA 1 and INCA 2 were using non-improved sanitation facilities (56.6% and 56.3%, respectively) compared with Comparison 1 and Comparison 2 (43.4% and 39.0%, respectively) (Table A6).
- INCA 2 had a significantly higher proportion of people in the lowest two wealth quintiles (60.4%) compared with either INCA 1 (33.6%), Comparison 1 (41.5%), or Comparison 2 (23.2%) (Table A7).
- INCA 1, INCA 2, and Comparison 1 had similar rates of handwashing with soap and water (12%–13%), but Comparison 2 had a significantly higher rate of handwashing with soap and water (28.8%) (Table A8).
- Across all intervention and comparison areas, almost no one had heard of the INCA intervention (Table A10).

Women's Characteristics

Key findings from the analysis of the respondents' characteristics were:

- INCA 1 and INCA 2 had slightly higher proportions of respondents who were ages 15 to 19 (27.8% and 27.2%, respectively) compared with the two comparison areas (approximately 24% in each comparison area) (Table A11a).
- The proportion of mothers with children under age two who had one and two children was slightly lower in INCA 2 compared with INCA 1 and with Comparison 1 and Comparison 2. Similarly, the proportion of women with children under age two who had three or more children was highest in INCA 2, compared with INCA 1 and the two comparison areas (Table A11a).
- INCA 2 had the highest proportion of women with children under two with no education (12.1%), compared with INCA 1 (5.6%), Comparison 1 (5.7%), and Comparison 2 (3.9%) (Table A11a).
- INCA 2 had the highest proportion of women with children under two in the lowest two wealth quintiles (60.4%) compared with INCA 1 (33.8%) and the two comparison areas. Comparison 2 had the lowest proportion of women in the lowest two wealth quintiles (22.7%), across all areas (Table A11a).
- INCA 2 had the lowest proportion of women with children under two who owned a mobile phone (61.6%) and was significantly lower than the 75.4% who owned mobile phones in Comparison 2 (Table A11a).
- Pregnant women had similar statistics to women with children under two, in terms of age, parity, wealth quintiles, education, and mobile phone usage (Table A11b).
- A little more than 40 percent of pregnant women and women with child under two had no education or had not completed their primary school education in the two INCA areas (Tables A12a and A12b).
- Approximately 84 percent of women with children under two and 87 percent of pregnant women did not access media (read a newspaper, watch television, or listen to the radio) at least once per week (Tables A13a and A13b).

Nutritional Status of Women and Children

Key findings from the analysis of the nutritional status of the women and children surveyed were:

- Height-for-age for children was lower in the INCA areas than in the comparison areas, with approximately nine percent of children at least three standard deviations below average height-for-age in INCA areas, compared with approximately six percent of children for the same measure in the comparison areas. Similarly, 28.6 percent of children were at least two standard deviations below average height-for-weight in the INCA project areas, compared with 22.6 percent of children for the same measure in the comparison areas (Tables A14a and A14b).
- INCA 2 had a higher proportion of children who were at least two standard deviations below average height-for-age (30.6%) than INCA 1 (26.4%). By contrast, Comparison 2 was slightly better on this measure (23.6%) than Comparison 1 (21.5%) (Tables A14a and A14b).

- Weight-for-height was similar in the INCA and comparison areas, with approximately 11% of children in INCA areas and 10% of children in comparison areas who were at least 2 standard deviations below average weight-for-height.
- The proportion of children who were at least 2 standard deviations below average weight-for-height was worse in INCA 2 areas (13%) compared to INCA 1 areas (10%). However, though the comparison areas were similar, it was Comparison 2 which was slightly better (10%) than Comparison 1 (11%) on this measure.
- INCA areas had significantly more children who were underweight compared to comparison areas. 24% of children in INCA areas were at least 2 standard deviations below average weight-for-age, compared to 19% of children for the same measure in comparison areas. When we examine differences within the INCA and Comparison Project areas, we found that INCA 2 had a significantly higher proportion of children (28%) who were at least 2 standard deviations below the average weight-for-age compared to INCA 1 (21%). In contrast, Comparison 1 and 2 were similar in this proportion to each other (18% and 19%, respectively).
- The proportion of mothers with children ages six to twenty-three months who were less than 145 cm in height was almost identical in INCA 1 and INCA 2 (approximately 10% of woman were less than 145 cm in both areas) (Table A15a). By contrast, Comparison 1 was worse than Comparison 2 on this measure (12.6% and 9.7%, respectively) (Table A15b).
- The proportion of mothers with children ages six to twenty-three months who had a normal body mass index (BMI) was similar in INCA 1 and INCA 2 (approximately 65.8% and 64.3%, respectively) (Table A15a). The proportion of women who had a normal BMI was actually slightly lower in Comparison 1 and Comparison 2 (61.5% and 60.5%, respectively) (Table A15b). The proportion of mothers who were moderately or severely thin was slightly higher in INCA 1 and INCA 2 (7.2% and 8.0%, respectively), compared with Comparison 1 and Comparison 2 (6.9% and 5.2%, respectively) (Tables A15a and A15b). Similarly, the proportion of mothers who were overweight or obese was higher in Comparison 1 and Comparison 2, (17.1% and 20.8%, respectively) compared with INCA 1 and INCA 2 (13.0% and 8.3%, respectively) (Tables A15a and A15b).

Nutritional Practices

We analyzed existing nutritional practices among all women surveyed. The key findings from this analysis were:

- The proportion of children who had ever been breastfed was almost 100 percent in the INCA and comparison areas. The proportion of children who were breastfed in the first hour after birth was also relatively high in INCA 1 and INCA 2 (71.4% and 66.1%) compared with Comparison 1 and Comparison 2 (60.8% in each comparison area). The proportion of children who had been breastfed within one day of birth rose to approximately 98 percent in both INCA 1 and INCA 2 and was similarly high in Comparison 1 and Comparison 2 (Tables A16a and A16b).
- The proportion of children who were exclusively breastfed in the first month was 95.3 percent across both INCA areas (Table A17a) and 93.0 percent in the comparison areas (Table A17d). The proportion of children who were exclusively breastfed had fallen to 69.2 percent in INCA 1 (Table A17b), 60.6 percent in INCA 2 (Table A17c), and 61.2 percent in the two comparison areas (Table A17d) by the time the child reached five months of age. However, 98 percent to 100 percent of children ages four to five months were

receiving breastfeeding in INCA 1 and INCA 2 and in the two comparison areas (Tables A17a through A17d).

- The proportion of breastfed children ages six to twenty-three months who received four or more food groups was 44.6 percent in INCA 1 and 29.9 percent in INCA 2 (Table A18a). In Comparison 1 and Comparison 2, the proportions of breastfed children who received four or more food groups were 38.9 percent and 34.7 percent, respectively (Table A18b). The proportion of children ages six to twenty-three months who received the minimum meal frequency was 69.4 percent in INCA 1, 66.1 percent in INCA 2 (Table A18a), 75.2 percent in Comparison 1, and 60.8 percent in Comparison 2 (Table A18b). The proportion of breastfed children who received both the 4+ meal groups and the minimum frequency of meals was 36.6 percent in INCA 1, 26.2 percent in INCA 2, 35.1 percent in Comparison 1, and 28.8 percent in Comparison 2 (Tables A18a and A18b).
- The proportion of non-breastfed children ages six to twenty-three months who had received three recommended IYCF practices was 28.4 percent in INCA 1, 10.9 percent in INCA 2, 25.6 percent in Comparison 1, and 14.0 percent in Comparison 2 (Tables A18 a and A18b).
- The proportion of lactating mothers who had consumed a diet of minimum diversity was 53.6 percent in INCA 1, 43.0 percent in INCA 2, 46.5 percent in Comparison 1, and 56.4 percent in Comparison 2 (Tables A19a and A19b).
- The proportion of pregnant women who had consumed a diet of minimum diversity was 62.2 percent in INCA 1, 44.0 percent in INCA 2, 58.0 percent in Comparison 1, and 60.2 percent in Comparison 2 (Tables A20a and A20b).

Nutrition-Related Knowledge

We analyzed the survey responses for the nutrition-related knowledge among women with children under age two, lactating mothers, and pregnant women. The results of this analysis were:

- The proportion of pregnant women who had proper knowledge of diet during pregnancy was 64.7 percent in INCA 1, 60.6 percent in INCA 2, 74.0 percent in Comparison 1, and 67.0 percent in Comparison 2 (Tables A21a and A21b). The poorest knowledge in both the INCA and comparison areas was about what other fruits and vegetables a pregnant women should consume, in addition to dark green leafy vegetables and vitamin A-rich fruits and vegetables. (The proportion of women who were aware of other fruits and vegetables to consume ranged from 10.9% in Comparison 1 to 28% in INCA 2) (Tables A21b and A21a, respectively).
- Most lactating mothers (94% and higher) of children less than six months old in both the INCA and comparison areas knew that they should start breastfeeding within one hour of birth. However, only 62.2 percent of lactating mothers in INCA 1, 47.8 percent of lactating mothers in INCA 2, 59.7 percent of lactating mothers in Comparison 1, and 48.8 percent of lactating mothers in Comparison 2 were aware about exclusive breastfeeding (Tables A22a and A22b).
- Similar to lactating mothers, most pregnant women (92% and higher) knew about the importance of starting breastfeeding within one hour of birth in both the INCA and comparison areas. However, also similar to lactating mothers, knowledge about exclusive breastfeeding was not as high, with 47.8 percent of

pregnant women in INCA 1, 37.8 percent of pregnant women in INCA 2, 50.9 percent of pregnant women in Comparison 1, and 37.5 percent of women in Comparison 2 aware about exclusive breastfeeding (Tables A23a and A23b).

- Almost all mothers with children older than nine months (97% and higher) were aware of the appropriate complementary feeding (MAD) for their children in both the INCA and comparison areas. However, the proportion of women with children ages six to eight months who were aware of the MAD for their children was much lower, with 67.3 percent in INCA 1, 71.0 percent in INCA 2, 66.5 percent in Comparison 1, and 64.0 percent in Comparison 2 (Tables A24a and A24b).
- Knowledge about MAD for children ages nine months and older was similarly high among pregnant women in both the INCA and comparison areas. However, similar to mothers with children ages less than two, pregnant women were relatively unaware about MAD for children ages six to eight months. The proportion of pregnant women who were aware about MAD for children ages six to eight months was 63.6 percent in INCA 1, 68.2 percent in INCA 2, 65.6 percent in Comparison 1, and 62.1 percent in Comparison 2 (Tables A25a and A25b).
- Almost all women with children under two in the INCA and comparison areas were aware of the importance of washing their hands after defecation, but a much smaller percentage was aware of the importance of washing their hands before feeding their child (Tables A26a and A26b). The proportion of women with children under two who were aware of washing their hands before feeding their child was 42.0 percent in INCA 1, 27.0 percent in INCA 2, 38.7 percent in Comparison 1, and 44.7 percent in Comparison 2. Overall, among the women with children under two, 34.1 percent in INCA 1, 19.5 percent in INCA 2, 32.0 percent in Comparison 1, and 36.4 percent in Comparison 2 were aware of all three critical times for handwashing (Tables A26a and A26b).
- Handwashing knowledge among pregnant women was similar to that of women with children under age two: almost all pregnant women were aware of the importance of handwashing after defecation in the INCA and comparison areas, but only 30.9 percent in INCA 1, 21.1 percent in INCA 2, 30.5 percent in Comparison 1, and 39.0 percent in Comparison 2 were aware of the importance of handwashing before feeding their child (Tables A27a and A27b, respectively). Knowledge about all three critical times for handwashing was low in both the INCA and comparison areas, with 26.0 percent of pregnant women in INCA 1, 15.6 percent of pregnant women in INCA 2, 23.3 percent of pregnant women in Comparison 1, and 30.9 percent of pregnant women in Comparison 2 aware of all three critical times for handwashing (Tables A27a and A27b, respectively).
- Sixty-six point one percent (66.1%) of lactating mothers in INCA 1 and 47.5 percent of lactating mothers in INCA 2 were aware of the CCs in their communities. Fifty-one point one percent (51.1%) of lactating mothers in INCA 1 and 29.6 percent of lactating mothers in INCA 2 were aware of at least two health services available at the CCs. Only five point six percent (5.6%) of lactating mothers in INCA 1 and one point nine percent (1.9%) of lactating mothers in INCA 2 were aware of the availability of nutrition counseling at the CCs (Table A28a).
- Sixty-two point three percent (62.3%) of pregnant women in INCA 1 and 48.7 percent of pregnant women in INCA 2 were aware of the CCs in their communities. Fifty point five percent (50.5%) of pregnant women in INCA 1 and 32.8 percent of pregnant women in INCA 2 were aware of at least two health services available at the CCs. Only six point four percent (6.4%) of pregnant women in INCA 1 and three

percent of pregnant women in INCA 2 were aware of the availability of nutrition counseling at the CCs (Table A28b).

- Forty-four point seven percent (44.7%) of lactating women in INCA 1 and 39.9 percent of lactating women in INCA 2 were aware of the Union Health and Family Welfare Centers (UHFWCs). Only 35.8 percent of lactating mother in INCA 1 and 28.3 percent of lactating mothers in INCA 2 were aware of the availability of at least two health services at the UHFWCs. Awareness about the nutrition counseling available at the UHFWCs was low, with three point four percent (3.4%) of lactating mothers in INCA 1 and two point two percent (2.2%) of lactating mothers in INCA 2 aware of the availability of nutrition counseling at UHFWCs (Table A29a).
- Forty-four percent of pregnant women in INCA 1 and 45.3 percent of pregnant women in INCA 2 were aware of the UHFWCs. Only 38.4 percent of pregnant women in INCA 1 and 34.2 percent of pregnant women in INCA 2 were aware of at least two health services available at the UHFWCs. Knowledge about nutrition counseling offered at the UHFWCs was low, with only three percent of pregnant women in INCA 1 and three point five percent of pregnant women in INCA 2 aware of the nutrition counseling available at the UHFWCs (Table A29b).

Access to INCA Interventions

The baseline survey showed that almost no women had been exposed to any INCA interventions, either in the INCA or comparison areas. Key findings about the respondents' access to the INCA interventions were:

- Almost no women in the INCA intervention areas or the comparison areas had been in contact with a CNP in 2017 (Tables A30a and 30b).
- Almost no women in the INCA intervention areas or the comparison areas knew about the WICs in 2017 (Tables A31a and 31b).
- Similarly, there was no knowledge about the CNSGs (Tables A33a and 33b) or participation in nutrition information dissemination activities in the INCA areas and the comparison areas in 2017 (Tables A32a and 32b).

Access to and Use of Nutrition Services

Last, we assessed the extent to which respondents in the INCA and comparison areas were using nutrition and health services. Key findings from this analysis were:

- Almost no last-born children under two had received nutrition services or counseling in the last three months in either the INCA or comparison areas (Table A34).
- Only a small percentage of last-born children under two had received growth monitoring in INCA 1 (4.2%) and in INCA 2 (1.8%). Similar situation is observed in Comparison areas (Table A34).
- Sixty-three point two percent (63.2%) and 48.1 percent of women ages 15–49 who had had a live birth in the preceding two years had received ANC from a medically trained provider (MTP) in INCA 1 and INCA 2, respectively. The findings in Comparison 1 and Comparison 2 were 61.9 percent and 77.0 percent, respectively (Table A36).

- ANC with an MTP was higher among women in the higher wealth quintiles, and lower among women in the lowest wealth quintiles (Table A36).
- Only 20.4 percent of women in INCA 1 and nine point seven percent (9.7%) of women in INCA 2 had received the recommended 4+ ANC from an MTP. In Comparison 1 and Comparison 2, the number of women who had received a 4+ ANC from an MTP was 17.3 percent and 29.6 percent, respectively (Table A37).
- Twenty-seven point four percent (27.4%) of live births in INCA 1 and 11.8 percent of live births in INCA 2 were done by an MTP (Table A38).
- Women in the lowest two wealth quintiles were significantly less likely to have had a delivery assisted by an MTP (9.9% and 12.1% for the lowest and the second lowest wealth quintiles, respectively) (Table A38).
- Twenty-eight point nine percent (28.9%) of live births in Comparison 1 and 35.6 percent of live births in Comparison 2 were assisted by an MTP (Table A38).
- Only 26.6 percent of women with live births in INCA 1 and 10.3 percent of women with live births in INCA 2 had received PNC within two days of birth. Women in the highest wealth quintile were significantly more likely to have received PNC within two days of birth in comparison with the lowest wealth quintiles (Table A39).
- The percentage of women who had received PNC within two days of birth was 27.5 percent and 34.3 percent in Comparison 1 and 2, respectively (Table A39).

Community Awareness About the Availability of Health Facilities and Services

- Most communities in both the INCA and comparison areas knew of at least one hospital that could service their needs. However, a much larger proportion of communities in the comparison areas knew of at least two hospitals in their districts, compared with the INCA areas. For example, in INCA 1, only six point two percent (6.2%) of the communities knew of two hospitals that could service their communities (Table A40a), whereas 38.5 percent of the communities in Comparison 1, and 35.4 percent of the communities in Comparison 2 were aware of two hospitals in their districts that could service their needs (Table A40b).
- INCA 1 communities expressed the most limited awareness about the UHCs in their communities (23.1% of the community leaders did not know of even one locally accessible UHC), compared with INCA 2 (Table A40a), and Comparison 1 and 2 (where more than 92% of the community leaders mentioned at least one locally accessible UHC) (Table A40b).
- In both the INCA and comparison communities, awareness about the availability of FWCs was high (exceeding 91%) (Tables A40a and A40b).
- Knowledge about the availability of Mother and Child Welfare Centers (MCWCs) was lowest in INCA 1 communities, with 23.1 percent of the communities unaware of any MCWC available to serve their needs (Table A40a). Knowledge about the availability of MCWCs in INCA 2, and Comparison 1 and Comparison 2 was high, with more than 80 percent of the communities expressing some awareness of the available MCWCs in their communities (Tables A40a and A40b).
- 89.2 percent of INCA 1 communities and 41.5 percent of INCA 2 communities were aware of the Smiling Sun clinics (static clinics operated under USAID's Nongovernmental Organization Health Service Delivery

Project [NHSDP]) available and accessible to their communities (Table A40a). By comparison, only seven point seven percent (7.7%) of Comparison 1 communities and 40.0 percent of Comparison 2 communities were aware of the Smiling Sun clinics available to their communities (Table A40b).

- Private facilities were known to be available by approximately 98 percent of the INCA 1 communities, 100 percent of the Comparison 1 communities, and 99 percent of the Comparison 2 communities (Tables A40a and A40b). By contrast, approximately 19 percent of the communities in INCA 2 were unaware of the private facilities available to their communities (Table A40a).
- Awareness about community clinics (CC) available to serve their communities was high in both INCA and comparison areas (exceeding 90% in all the areas) (Tables A40a and A40b).
- The availability of nongovernmental organization (NGO) health facilities (excluding the Smiling Sun clinics) was moderate to low in the INCA and comparison areas: 44.6 percent of INCA 1 communities, 58.5 percent of INCA 2 communities, 58.5 percent of Comparison 1 communities, and 35.4 percent of Comparison 2 communities were not aware of any NGO facilities available to their communities (Tables A40a and 40b).
- The median distance to the closest district hospital was 40 kilometers (km) in both INCA 1 and 2 (Table A41a), and 36 km in Comparison 1 and 25 km in Comparison 2 (Table A41b).
- The median distance to the nearest UHC (if there was one available) was between seven and nine km in the INCA and comparison areas (Tables A41a and A41b).
- The median distance to the nearest FWC (if available to the community) was between two and three km in both the INCA and comparison areas. Generally, excluding the CCs, the FWCs were the closest to the communities (Tables A41a and 41b).
- The median distance to a MCWC was lowest in INCA 1 (at 14 km) (Table A41a). INCA 2 and Comparison 1 and 2 communities were relatively far from MCWCs known to serve their communities (42 km, 35 km, and 26 km, respectively) (Tables A41a and A41b). The MCWCs were generally closer (in median terms) to their respective INCA 1 communities than were the district hospitals (Table 41a).
- The Smiling Sun clinics (if available) were relatively close in INCA 1 and INCA 2, and in Comparison 2 communities, ranging between six and nine km (Tables A41a and 41b). However, the Smiling Sun clinics were relatively far away from the Comparison 1 communities, at a median distance of 35 km (Table A41b).
- The median distance from communities to the nearest available private facility was 12 km in INCA 1, 18 km in INCA 2, 13 km in Comparison 1, and eight km in Comparison 2 (Tables A41a and A41b).
- ANC, PNC, normal delivery, child health, and family planning services were almost universally available at the closest facilities in both INCA and comparison areas (ranging from 95% to 100 % in availability, according to the community leaders) (Tables A42a and A42b).
- The availability of nutrition services was lower than maternal, child, and reproductive health services at the closest facilities (Tables A42a and 42b). Note that INCA 1 had some areas that had previously been under the FTF initiative.

Comparability of Areas

- The degree of similarity between the intervention and comparison areas was low. These results are not surprising considering that the evaluation design is not experimental and the limited information available to select the comparison groups. The results indicated the need to use appropriate methods to control for pre-existing differences between the intervention and comparison groups during the estimation of program impact, which we will do by using a DID with fixed effects estimation model.

CONCLUSIONS

For childhood nutritional status, the prevalence of wasting in INCA and comparison areas were similar, but the prevalence of both stunting and underweight among children age 0-23 months in INCA areas was higher than in comparison areas. Stunting prevalence among children age 0-23 months in INCA areas was similar to the 2014 BDHS estimate for rural Barisal (29%). The prevalence of underweight in rural Barisal (31%) estimated in the 2014 BDHS was much higher than either INCA or comparison areas. Within INCA areas, INCA 2 area had a higher stunting as well as underweight prevalence than INCA 1 area. For the nutritional status of women, the prevalence of underweight among mothers with children age 6-23 months in INCA areas was higher than comparison areas—both of which were lower than the 2014 BDHS estimate (31%).

In terms of existing nutritional practices among women, the prevalence of exclusive breastfeeding among children under six months both in INCA areas and comparison areas were markedly higher than the 2014 BDHS estimate for rural Barisal (52%). The proportion of children age 6-23 months receiving a minimum acceptable meal was similar in INCA and comparison areas, but higher than the 2014 BDHS estimate (23%). Nearly half of the breastfeeding mothers consumed a diet of minimum diversity in both INCA and comparison areas. A higher proportion of surveyed women in comparison areas were found to have appropriate nutrition-related knowledge than women in INCA areas in terms of proper diet during pregnancy and handwashing. The poorest knowledge in both the INCA and comparison areas was about fruits and vegetables a pregnant woman should consume. Knowledge about exclusive breastfeeding among surveyed women found to be similar in INCA and comparison areas.

The baseline survey confirmed that almost no women had been exposed to any INCA interventions (e.g., contact with a CNP or knowledge about WICs and CNSGs) either in the INCA or comparison areas. Almost no last-born children under two had received nutrition services or counseling in the last three months in either of these areas as well. The use of nutrition and maternal health services (e.g., growth monitoring, ANC from medically trained provider, skilled birth attendance, and PNC) in INCA 1 area was similar to comparison areas but notably higher than the INCA 2 area. The degree of similarity between the intervention and comparison areas found to be low, as the evaluation design is not experimental and the limited information available to select the comparison groups. The results indicated the need to use appropriate methods such as DID with fixed effects estimation model to control for pre-existing differences between the intervention and comparison groups during the estimation of program impact.

APPENDIX A. BASELINE SURVEY TABLES

Household Characteristics

Table A1. Results of the household and individual interviews

Number of households, number of interviews, and response rates, according to domain (unweighted), INCA baseline survey, 2017

Result	Intervention areas			Comparison areas		
	INCA 1 ³	INCA 2 ⁴	Total INCA	Comparison 1 ⁵	Comparison 2 ⁶	Total comparison
Household interviews						
Households selected	2,980	2,974	5,954	2,762	2,756	5,518
Households occupied	2,908	2,905	5,813	2,676	2,658	5,334
Households interviewed	2,899	2,892	5,791	2,661	2,648	5,309
Household response rate ¹	99.7	99.6	99.6	99.4	99.6	99.5
Interviews with mothers with children under two						
Number of eligible women	2,207	2,186	4,393	2,032	2,129	4,161
Number of eligible women interviewed	2,093	2,073	4,166	1,864	1,905	3,769
Eligible mothers response rate ²	94.8	94.8	94.8	91.7	89.5	90.6
Interviews with pregnant women ages 15–49						
Number of eligible women	522	620	1,142	420	477	897
Number of eligible women interviewed	483	575	1,058	368	402	770
Eligible pregnant women response rate ²	92.5	92.7	92.6	87.6	84.3	85.8

¹ Households interviewed/households occupied.

² Respondents interviewed/eligible respondents.

³ INCA 1, comprised of seven upazilas in Bhola district: Bhola Sadar, Daulatkhan, Burhanuddin, Tazumaddin, Lalmohon, Char Fasson, and Manpura.

⁴ INCA 2, comprised of four upazilas in Laksmipur and Noakhali districts: Subarnachar, Hatiya, Kamalnagar, and Ramgati.

⁵ Comparison 1, comprised of four upazilas in Barisal and Patuakhali: Mehendiganj, Bauphal, Dashmina, and Golachipa.

⁶ Comparison 2, comprised of four upazilas in Noakhali, Feni, and Chittagong: Kabiehat, Companiganj, Sonagazi, and Swandeeep.

Table A2. Household composition

Percentage distribution of households, by sex of head of household and by household size; and mean size of household, according to domain, INCA baseline survey, 2017

Household composition	Intervention areas			Comparison areas		
	INCA 1	INCA 2	Total INCA	Comparison 1	Comparison 2	Total comparison
Household headship						
Male	81.0	77.2	79.1	81.7	67.0	74.4

Note: Table is based on children who stayed in the household on the night before the interview. Each index is expressed in standard deviation (SD) units from the median of the WHO Child Growth Standards adopted in 2006.

The table is based on children with valid dates of birth (month and year) and valid measurements of both height and weight.

¹ Excludes children whose mother was not interviewed

² For women who were not interviewed, information taken from the household questionnaire; excludes children whose mother was not listed in the household questionnaire

³ Includes children who are below -3 SDs from the WHO Child Growth Standards population median

Table A14b. Nutritional status of children: comparison areas

Percentage of children under age two classified as malnourished according to three anthropometric indices of nutritional status: height-for-age, weight-for-height, and weight-for-age, by background characteristics in comparison areas, INCA baseline survey, 2017

Background characteristics	Height-for-age ¹ (stunting)		Weight-for-height		Weight-for-age (underweight)		Number of children

Female	1.2	22.5	3.8	0.3	1.8	70.5	100.0	98.8	1,999	6.7	2,024
Total INCA	1.6	23.1	3.6	0.3	2.1	69.4	100.0	98.4	4,103	8.3	4,148

Note: Breastfeeding status refers to a "24-hour" period (yesterday and last night). Children who are classified as breastfeeding and consuming plain water only consumed no liquid or solid supplements. The categories of not breastfeeding, exclusively breastfed, breastfeeding and consuming plain water, non-milk liquids, other milk, and complementary foods (solids and semi-solids) are hierarchical and mutually exclusive, and their percentages add to 100 percent. Thus, children who receive breast milk and non-milk liquids and who do not receive other milk and who do not receive complementary foods are classified in the non-milk liquid category even though they may also get plain water. Any children who get complementary food are classified in that category as long as they are also breastfeeding.

¹ Nonmilk liquids include juice, juice drinks, clear broth, or other liquids

Table A17b. Breastfeeding status, by child's background characteristics: INCA 1 areas

Percentage distribution of youngest children under age two who are living with their mother by breastfeeding status, and the percentage currently breastfeeding; and the percentage of all children under age two using a bottle with a nipple, according to age in months and sex in INCA 1, INCA baseline survey, 2017

Background characteristics	Not breast-feeding	Breastfeeding status					Total	Percentage currently breast-feeding	Number of youngest children under two years living with their mother	Percentage using a bottle with a nipple	Number of all children under age two
		Exclusively breastfed	Breastfeeding and consuming plain water only	Breast-feeding and consuming non milk liquids ¹	Breast-feeding and consuming other milk	Breastfeeding and consuming complementary foods

Note: Figures in parentheses are based on 25–49 unweighted cases. An asterisk indicates that an estimate is based on fewer than 25 unweighted cases and has been suppressed.

¹ Food groups: (a) infant formula, milk other than breast milk, cheese or yogurt or other milk products; (b) foods made from grains, roots, and tubers, including porridge and fortified baby food from grains, pastry ; (c) vitamin A-rich fruits and vegetables (and oil, butter); (d) other fruits and vegetables; (e) eggs; (f) meat, poultry, fish, and shellfish (and organ meats); (g) legumes and nuts.

² At least twice a day for breastfed infants ages six to eight months and at least three times a day for breastfed children ages nine to twenty-three months.

³ Includes two or more feedings of commercial infant formula, fresh, tinned, and powdered animal milk, and yogurt.

⁴ Minimum meal frequency is receiving solid or semisolid food or milk feeds at least four times a day.

⁵ Fed with other milk or milk products at least twice a day; receive solid or semisolid foods from at least four food groups not including the milk or milk products food group; and receive the minimum meal frequency.

⁶ Breastfeeding, or not breastfeeding and receiving two or more feedings of commercial infant formula, fresh, tinned, and powdered animal milk, and yogurt.

⁷ Children are fed the minimum recommended number of times per day according to their age and breastfeeding status as described in footnotes 2 and 4.

Table A18b. IYCF/MAD practices: comparison areas

Percentage of youngest children ages six to twenty-three months living with their mother who are fed according to the three IYCF feeding practices, based on breastfeeding status, number of food groups, and times they are fed during the day or night preceding the survey, by background characteristics in comparison areas, INCA baseline survey, 2017

¹ Food groups: (a) infant formula, milk other than breast milk, cheese or yogurt or other milk products; (b) foods made from grains, roots, and tubers, including porridge and fortified baby food from grains; (c) vitamin A-rich fruits and vegetables (and red palm oil); (d) other fruits and vegetables; (e) eggs; (f) meat, poultry, fish, and shellfish (and organ meats); (g) legumes and nuts.

² At least twice a day for breastfed infants ages six to eight months and at least three times a day for breastfed children ages nine to 23 months

³ Includes two or more feedings of commercial infant formula, fresh, tinned, and powdered animal milk, and yogurt

⁴ Minimum meal frequency is receiving solid or semisolid food or milk feeds at least four times a day.

⁵ Fed with other milk or milk products at least twice a day; receive solid or semisolid foods from at least four food groups not including the milk or milk products food group; and receive the minimum meal frequency

⁶ Breastfeeding, or not breastfeeding and receiving two or more feedings of commercial infant formula, fresh, tinned, and powdered animal milk, and yogurt

⁷ Children are fed the minimum recommended number of times per day according to their age and breastfeeding status as described in footnotes 2 and 4.

Table A19a. Lactating mothers consuming a diet of minimum diversity: INCA areas

Percentage of lactating mothers with youngest child age under two years who consumed /were fed different food groups during the last 24 hours in the day or night preceding the survey; percentage who consumed a diet of minimum diversity,¹ by background characteristics in INCA project areas, INCA baseline survey, 2017

Note: If more than one source of delivery assistant was mentioned, only the provider with the highest qualification was considered in the tabulation.

¹ Medically trained providers include a qualified doctor, nurse/midwife, FWV, and CSBA.

² Other includes the MA/SACMO.

Table A39. Postnatal check-up for mother

Percentage distribution of live births in the last 0–23 months preceding the survey, by timing of postnatal care (PNC) after delivery; and percentage receiving PNC within two days from a medically trained provider, INCA baseline survey, 2017

Background characteristics	Time after delivery mother got first postnatal check-up						Percentage receiving check-up within 2 days of delivery from a medically trained provider ²	Number of women

APPENDIX B. BALANCE TEST TABLES

Household Characteristics

Variables	Comparison		Intervention		Mean	Diff	p-value	Effect Size
	Mean	N1	Mean	N2	Diff	SE		
Mean number of usual household members	5.442	5,309	5.372	5,791	-0.070	0.060	0.243	-0.033
Mean number of children ages 0–4 years	1.165	5,309	1.153	5,791	-0.012	0.018	0.498	-0.019
Mean number of children ages 5–14 years	0.988	5,309	1.134	5,791	0.145	0.027	0.000	0.147
Mean number of household members ages 15–24 years	1.112	5,309	1.095	5,791	-0.017	0.025	0.483	-0.017
Mean number of household members ages 25–64 years	1.825	5,309	1.687	5,791	-0.138	0.027	0.000	-0.139
Mean number of household members ages 65+ years	0.350	5,309	0.303	5,791	-0.048	0.013	0.000	-0.085

Variables	Comparison		Intervention		Mean	Diff	p-value	Effect Size
	Mean	N1	Mean	N2	Diff	SE		
Male household head	0.744	5,309	0.791	5,791	0.047	0.016	0.005	0.111
Highest level of education of household head: None	0.281	5,309	0.345	5,791	0.064	0.016	0.000	0.140
Highest level of education of household head: Primary incomplete	0.268	5,309	0.315	5,791	0.048	0.011	0.000	0.104
Highest level of education of household head: Primary complete	0.128	5,309	0.124	5,791	-0.005	0.008	0.567	-0.014
Highest level of education of household head: Secondary incomplete	0.212	5,309	0.140	5,791	-0.072	0.011	0.000	-0.187
Highest level of education of household head: Secondary complete or higher	0.108	5,309	0.075	5,791	-0.032	0.009	0.000	-0.111
Marital status of household head: Currently married	0.922	5,309	0.955	5,791	0.033	0.006	0.000	0.138
Marital status of household head: Divorced/separated/widowed	0.073	5,309	0.042	5,791	-0.031	0.006	0.000	-0.133
Marital status of household head: Never married	0.005	5,309	0.003	5,791	-0.002	0.001	0.084	-0.034

Table B1.3. Household characteristics (comparison vs. intervention areas)

Variables	Comparison		Intervention		Mean	Diff	p-value	Effect Size
	Mean	N1	Mean	N2	Diff	SE		
Owens only homestead land	0.498	5,309	0.541	5,791	0.043	0.019	0.026	0.086
Owens homestead land	0.924	5,309	0.892	5,791	-0.032	0.016	0.046	-0.111
Owens other land	0.430	5,309	0.359	5,791	-0.071	0.021	0.001	-0.145
Owens neither homestead nor other land	0.072	5,309	0.100	5,791	0.028	0.015	0.064	0.100
Tin as main roof material	0.921	5,309	0.947	5,791	0.026	0.013	0.053	0.107
Tin as main wall material	0.824	5,309	0.863	5,791	0.039	0.018	0.028	0.107
Cement as main wall material	0.133	5,309	0.096	5,791	-0.037	0.015	0.015	-0.114
Earth/sand as main flooring material	0.852	5,309	0.912	5,791	0.060	0.015	0.000	0.185
Cement as main flooring material	0.144	5,309	0.087	5,791	-0.057	0.015	0.000	-0.179
Improved drinking water source	1.000	5,309	0.997	5,791	-0.003	0.003	0.264	-0.076
Improved toilet	0.472	5,309	0.324	5,791	-0.148	0.021	0.000	-0.302
Has electricity	0.477	5,309	0.388	5,791	-0.089	0.051	0.082	-0.179
Has solar electricity	0.512	5,309	0.472	5,791	-0.040	0.039	0.297	-0.081
Uses wood as primary cooking fuel	0.867	5,309	0.852	5,791	-0.015	0.015	0.312	-0.043
Uses agricultural crop as primary cooking fuel	0.088	5,309	0.118	5,791	0.030	0.014	0.030	0.098
Cooking done in separate building	0.771	5,309	0.632	5,791	-0.139	0.022	0.000	-0.302
Cooking done in the house	0.121	5,309	0.275	5,791	0.155	0.023	0.000	0.383

Table B1.4. Household assets (comparison vs. intervention areas)

Variables	Comparison		Intervention		Mean	Diff	p-value	Effect Size
	Mean	N1	Mean	N2	Diff	SE		
Has a television	0.240	5,309	0.119	5,791	-0.120	0.023	0.000	-0.312
Has a mobile phone	0.973	5,309	0.960	5,791	-0.013	0.004	0.003	-0.072
Has a refrigerator	0.158	5,309	0.062	5,791	-0.096	0.018	0.000	-0.305
Has almirah/wardrobe	0.373	5,309	0.182	5,791	-0.191	0.024	0.000	-0.426
Has an electric fan	0.540	5,309	0.429	5,791	-0.111	0.039	0.005	-0.222
Has a water pump	0.064	5,309	0.021	5,791	-0.043	0.009	0.000	-0.213
Has a computer/laptop	0.018	5,309	0.009	5,791	-0.008	0.003	0.002	-0.072
Has a bank account	0.243	5,309	0.153	5,791	-0.090	0.017	0.000	-0.225
Has an auto bike/tempo/CNG	0.027	5,309	0.021	5,791	-0.005	0.003	0.115	-0.036

INFORMED CONSENT FOR HOUSEHOLD QUESTIONNAIRE INTERVIEWS

Title of Research: Improving Nutrition Through Community-Based Approaches (INCA) – Baseline Survey 2017

Principal Investigator for Field Activities: S. N. Mitra

Participating Institute: Mitra and Associates

Introductory statement: My name is _____. I have come from Mitra and Associates, a private research organization, located in Senpara Porbota, Mirpur, Dhaka. To assist in the implementation of social development programs in the country, we conduct several types of surveys. We are now conducting a survey, which aims to assess the knowledge, attitude, and practices of pregnant women and mother of under 2 child focusing on their health, and nutrition issues.

The survey is supported by the United States Agency for International Development (USAID). The survey is being coordinated by the University of North Carolina in Chapel Hill, North Carolina, USA. The data will be examined by Mitra and Associates and by researchers at

the University of North Carolina in Chapel Hill, North Carolina, USA. icddr,b is providing technical assistance for maintaining the quality of data. I would very much appreciate your participation in this survey.

Why the study being done: The study will help understand the state and determinants about nutrition issues in Bangladesh.

What is involved in the study: You have been randomly selected as a respondent in this study. The study will collect information from the household. I would like to ask you about the socio-economic condition of your household.

What will you have to do if you agree to participate: Since, you have been selected as a respondent in this study. I shall be thankful if you provide your valuable response on certain issues. If some questions cause you embarrassment or make you feel uncomfortable, you can refuse to answer them. The survey usually takes between 20 and 30 minutes to complete.

What are the risks and benefits of this study: By providing information you will not have any risk what so ever, rather this will help the government and policy planners to formulate policies plan and develop health programs.

Confidentiality: Whatever information you provide will be kept strictly confidential. It will be used for research purposes only and will be seen only by staff and researchers at the organizations mentioned.

Is there any compensation for participating in the study: Your participation in the study is voluntary and promises no financial benefit; however, the Government particularly the Ministry of Health and Family Planning (MOHFW) will be benefited from the study.

Right to refuse or withdraw: Participation in this survey is voluntary and you can choose not to answer any individual question or all the questions. However, we hope that you will participate in this survey since your views are important.

Who do I contact if I have questions or problems: If you wish to know more about your rights as a participant in this study you may contact the Bangladesh Medical Research Council (BMRC), Mohakhali, Dhaka (Phone: 8819311, 8828396) or the Institutional Review Board (IRB), University of North Carolina at Chapel Hill, 720 Martin Luther King Jr., Blvd., Bldg. 385, 2nd Floor, Chapel Hill, NC 27599-7097 USA. You can reach an IRB person through collect call if necessary, at 001-919-966-3012. You may also call the Dhaka-based UNC MEASURE Evaluation Advisor (Phone: 01730376458). If you have further questions regarding the nature of this study you may also contact Mitra and Associates Commercial Plot # 35 (Floor 3rd-5th), Main Road # 01, Section-10, Senpara Porbota, Mirpur, Dhaka-1216 Tel: 9025410, 9025412.
Now, do you want to ask me anything about the survey?

May I begin the interview now? Yes 1 No | 2 End _____

Participant's Name: _____ Signature (or thumb print): _____ Date: _____

Name of witness: _____ Signature (or thumb print): _____ Date: _____

Name of person obtaining consent: _____ Signature: _____ Date: _____

(Must be study investigator or individual who has been designated to obtain consent)

HOUSEHOLD SCHEDULE

RECORD THE TIME STARTED.

Hour

Minute

Now we would like some information about the people who usually live in your household.

INFORMED CONSENT FOR MOTHERS OF UNDER 2 CHILDREN

Title of Research: Improving Nutrition Through Community-Based Approaches (INCA) (Age 18-49 years)

Principal Investigator for Field Activities: S. N. Mitra

Participating Institute: Mitra and Associates

Introductory statement: My name is _____. I have come from Mitra and Associates, a private research organization, located in Senpara Porbota, Mirpur, Dhaka. To assist in the implementation of social development programs in the country, we conduct several types of surveys. We are now conducting a survey, which aims to assess the knowledge, attitude, and practices of pregnant and lactating women about health, and nutrition related issues. We will mainly focus on nutrition issues. The survey is financial supported by the United States Agency for International Development (USAID). The survey is being coordinated by the University of North Carolina in Chapel Hill, North Carolina, USA. The data will be examined by Mitra and Associates and by researchers at the University of North Carolina in Chapel Hill, North Carolina, USA. icddr,b is providing technical assistance for providing quality control activities of the survey. I would very much appreciate your participation in this survey.

Why the study being done: The study will help understand the state and determinants about maternal and child nutrition in Bangladesh.

What is involved in the study: You have been randomly selected as a respondent in this study. I would like to ask you some questions about your child, including about your health.

What will you have to do if you agree to participate: Since, you have been selected as a respondent in this study. I shall be thankful if you provide your valuable response on certain issues. If some questions cause you embarrassment or make you feel uncomfortable, you can refuse to answer them. The survey usually takes between 30 and 45 minutes to complete.

What are the risks and benefits of this study: By providing information you will not have any risk what so ever, rather this will help the government and policy planners to formulate policies and develop health programs.

Confidentiality: Whatever information you provide will be kept strictly confidential. It will be used for research purposes and will be seen only by staff and researchers at the organizations mentioned.

Is there any compensation for participating in the study: Your participation in the study is voluntary and promises no financial benefit; however, the Government particularly the Ministry of Health and Family Planning (MOHFW) will be benefited from the study.

Right to refuse or withdraw: Participation in this survey is voluntary and you can choose not to answer any individual question or all the questions. However, we hope that you will participate in this survey since your views are important.

Who do I contact if I have questions or problems: If you wish to know more about your rights as a participant in this study you may contact the Bangladesh Medical Research Council (BMRC), Mohakhali, Dhaka (Phone: 8819311, 8828396) or the Institutional Review Board (IRB), University

of North Carolina at Chapel Hill, 720 Martin Luther King Jr., Blvd., Bldg. 385, 2nd Floor, Chapel Hill, NC 27599-7097 USA. You can reach an IRB person through collect call if necessary, at 001-919-966-3012. You may also call the Dhaka-based UNC MEASURE Evaluation Advisor (Phone: 01730376458). If you have further questions regarding the nature of this study you may also contact Mitra and Associates Commercial Plot # 35 (Floor 3rd-5th), Main Road # 01, Section-10, Senpara Porbota, Mirpur, Dhaka-1216 Tel: 9025410, 9025412.

May I begin the interview now? Yes 1 _____ No 2 _____ END

INFORMED CONSENT FOR PREGNANT WOMAN'S QUESTIONNAIRE

Title of Research: Improving Nutrition Through Community-Based Approaches (INCA)

Principal Investigator for Field Activities: S. N. Mitra

Participating Institute: Mitra and Associates

Introductory statement: My name is _____. I have come from Mitra and Associates, a private research organization, located in Senpara Porbota, Mirpur, Dhaka. To assist in the implementation of social development programs in the country, we conduct several types of surveys. We are now conducting a survey, which aims to assess the knowledge, attitude, and practices of pregnant and lactating women about health, and nutrition related issues. We will mainly focus on nutrition issues. The survey is financial supported by the United States Agency for International Development (USAID). The survey is being coordinated by the University of North Carolina in Chapel Hill, North Carolina, USA. The data will be examined by Mitra and Associates and by researchers at the University of North Carolina in Chapel Hill, North Carolina, USA. icddr,b is providing technical assistance for providing quality control activities of the survey. I would very much appreciate your participation in this survey.

Why the study being done: The study will help understand the state and determinants about maternal and child nutrition in Bangladesh.

What is involved in the study: You have been randomly selected as a respondent in this study. I would like to ask you some questions about yourself, including about your health.

What will you have to do if you agree to participate: Since, you have been selected as a respondent in this study. I shall be thankful if you provide your valuable response on certain issues. If some questions cause you embarrassment or make you feel uncomfortable, you can refuse to answer them. The survey usually takes between 30 and 45 minutes to complete.

What are the risks and benefits of this study: By providing information you will not have any risk what so ever, rather this will help the government and policy planners to formulate policies and develop health programs.

Confidentiality: Whatever information you provide will be kept strictly confidential. It will be used for research purposes and will be seen only by staff and researchers at the organizations mentioned.

Is there any compensation for participating in the study: Your participation in the study is voluntary and promises no financial benefit; however, the Government particularly the Ministry of Health and Family Planning (MOHFW) will be benefited from the study.

Right to refuse or withdraw: Participation in this survey is voluntary and you can choose not to answer any individual question or all the questions. However, we hope that you will participate in this survey since your views are important.

Who do I contact if I have questions or problems: If you wish to know more about your rights as a participant in this study you may contact the Bangladesh Medical Research Council (BMRC), Mohakhali, Dhaka (Phone: 8819311, 8828396) or the Institutional Review Board (IRB), University

North Carolina at Chapel Hill, 720 Martin Luther King Jr., Blvd., Bldg. 385, 2nd Floor, Chapel Hill, NC 27599-7097 USA. You can reach an IRB person through collect call if necessary, at 001-919-966-3012. You may also call the Dhaka-based UNC MEASURE Evaluation Advisor (Phone: 01730376458). If you have further questions regarding the nature of this study you may also contact Mitra and Associates Commercial Plot # 35 (Floor 3rd-5th), Main Road # 01, Section-10, Senpara Porbota, Mirpur, Dhaka-1216 Tel: 9025410, 9025412.

May I begin the interview now? Yes 1 No 2 End _____

Participant's Name: _____ Signature (or thumb print):.....Date:.....

Name of witness: _____ Signature (or thumb print):.....Date:.....

Name of person obtaining consent: _____ Signature:.....Date:.....
(Must be study investigator or individual who has been designated to obtain consent)

SECTION 1. RESPONDENT'S BACKGROUND

NO.	QUESTIONS AND FILTERS	CODING CATEGORIES	SKIP
101	RECORD THE TIME.	HOUR..... <input type="checkbox"/> <input type="checkbox"/> MINUTES..... <input type="checkbox"/> <input type="checkbox"/>	
102	In what month and year were you born?	MONTH <input type="checkbox"/> <input type="checkbox"/> DON'T KNOW MONTH..... 98 YEAR..... <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> DON'T KNOW YEAR 9998	
102A	How old were you at your last birthday? COMPARE AND CORRECT 102 AND/OR 103 IF INCONSISTENT.	AGE IN COMPLETED YEARS..... <input type="checkbox"/> <input type="checkbox"/>	
103	Are you now married, separated, deserted, divorced, or widowed?	CURRENTLY MARRIED..... 1 SEPARATED..... 2 DESERTED 3 DIVORCED..... 4 WIDOWED 5	
104	Have you ever attended school/madrasha?	YES 1 NO 2 → 108	
104A	What type of school have you last attended?	SCHOOL 1 MADRASHA 2	
105	What is the highest level of school you attended: primary, secondary, or higher?	PRIMARY 1 SECONDARY 2 HIGHER..... 3	
106	What is the highest class you completed at that level? IF COMPLETED LESS THAN ONE YEAR AT THAT LEVEL, RECORD '00'.	CLASS..... <input type="checkbox"/> <input type="checkbox"/>	
107	CHECK 105: PRIMARY <input type="checkbox"/> SECONDARY OR HIGHER <input type="checkbox"/> → 110		
108	Now I would like you to read this sentence to me. SHOW CARD TO RESPONDENT. IF RESPONDENT CANNOT READ WHOLE SENTENCE, PROBE: Can you read any part of the sentence to me?	CANNOT READ AT ALL.....1 ABLE TO READ ONLY PARTS OF SENTENCE 2 ABLE TO READ WHOLE SENTENCE..... 3 NO CARD WITH REQUIRED LANGUAGE _____ 4 (SPECIFY) BLIND/VISUALLY IMPAIRED 5	
109	CHECK 108: CODE 2, 3 OR 4 CIRCLED <input type="checkbox"/> CODE 1 OR 5 CIRCLED <input type="checkbox"/> → 111		

110	Do you read a newspaper or magazine at least once a week, less than once a week or not at all?	AT LEAST ONCE A WEEK..... 1 LESS THAN ONCE A WEEK 2 NOT AT ALL..... 3	
111	Do you listen to the radio at least once a week, less than once a week or not at all?	AT LEAST ONCE A WEEK..... 1 LESS THAN ONCE A WEEK..... 2 NOT AT ALL..... 3	
112	Do you watch television at least once a week, less than once a week or not at all?	AT LEAST ONCE A WEEK..... 1 LESS THAN ONCE A WEEK..... 2 NOT AT ALL..... 3	
NO.	QUESTIONS AND FILTERS	CODING CATEGORIES	SKIP
113	What is your religion?	ISLAM..... 1 HINDUISM..... 2 BUDDHISM..... 3 CHRISTIANITY 4 OTHER 6 (SPECIFY)	
114	Do you belong to any of the following organizations? Grameen Bank? BRAC? BRDB? ASHA? PROSHIKA? Mother's Club? Any other organization (such as micro credit)?	YES NO GRAMEEN BANK 1 2 BRAC 1 2 BRDB..... 1 2 ASHA..... 1 2 PROSHIKA 1 2 MOTHER'S CLUB..... 1 2 OTHER 1 2 (SPECIFY)	
115	Do you have a mobile phone?	YES 1 NO..... 2	

SECTION 2. REPRODUCTION

NO.	QUESTIONS AND FILTERS	CODING CATEGORIES	SKIP
	Now I would like to ask about all the births you have had during your life.		
201	Have you ever given birth?	YES 1 NO 2 →	206

NO.	QUESTIONS AND FILTERS	CODING CATEGORIES	SKIP
	Now we would like to ask some questions about your knowledge on complementary feeding		
801	At what age complementary feeding should be introduced along with continued breastfeeding?	MONTHS..... <input type="checkbox"/> <input type="checkbox"/>	
802A	What should be the consistency of complementary food for a child age 6-8 months?	Liquid 1 Mashed 2 Semi solid 3 Solid..... 4 Normal food 5 Food in small pieces 6 Others 7 (Specify) Don't know 8	
802AA	How much soft/mashed or semi solid food should be given every time to a child of 6-8 months? SHOW A 250 ML BOWL	Quarter bowl 1 Three quarter bowl..... 2 Half bowl..... 3 Full bowl..... 4 More than one full bowl 5	
802B	In a 24 hours time period, how many times soft/mashed or semi solid food should be given to a child of 6-8 months?	NUMBER OF TIMES <input type="checkbox"/> <input type="checkbox"/>	
802C	In a 24 hours time period, how many times snacks should be given to a child of 6-8 months?	NUMBER OF TIMES <input type="checkbox"/> <input type="checkbox"/>	
802D	Does breastfeeding should continue to a child of 6-8 months?	Yes 1 No 2	
803A	What should be the consistency of complementary food for a child age 9-11 months?	Liquid 1 Mashed 2 Semi solid 3 Solid..... 4 Normal food 5 Food in small pieces 6 Others 7 (Specify) Don't know 8	
803AA	How much semi or solid food should be given every time to a child of 9-11 months? SHOW A 250 ML BOWL	Quarter bowl 1 Three quarter bowl..... 2 Half bowl..... 3 Full bowl..... 4 More than one full bowl 5	
803B	In a 24 hours time period, how many times semi or solid food should be given to a child of 9-11 months?	NUMBER OF TIMES <input type="checkbox"/> <input type="checkbox"/>	
803C	In a 24 hours time period, how many times snacks should be given to a child of 9-11 months?	NUMBER OF TIMES <input type="checkbox"/> <input type="checkbox"/>	

803D	Does breastfeeding should continue to a child of 9-11 months?	Yes 1 No 2	
804A	What should be the consistency of complementary food for a child age 12-23 months	Liquid 1 Mashed 2 Semi solid 3 Solid 4 Normal food 5 Food in small pieces 6 Others 7 (Specify) Don't know 8	
804AA	How much semi or solid food should be given every time to a child of 12-23 months? SHOW A 250 ML BOWL	Quarter bowl 1 Three quarter bowl..... 2 Half bowl..... 3 Full bowl..... 4 More than one full bowl 54	
804B	In a 24 hours time period, how many times semi or solid food should be given to a child of 12-23 months?	NUMBER OF TIMES □□	
804C	In a 24 hours time period, how many times snacks should be given to a child of 12-23 months?	NUMBER OF TIMES □□	
804D	Does breastfeeding should continue to a child of 12-23 month?	Yes 1 No 2	
806	What types of food a child of 6-23 months should eat every day in continuation of breastfeeding?	Grains, white roots and tubes, and plantains..... A Pulses (beans, peas, and lentils) B Nuts and seeds C Dairy products D Meat, poultry and fish..... E Eggs..... F Dark green leafy vegetables G Other vitamin-A rich fruits and vegetables..... H Other vegetables..... I Specify: _____ Other fruits J Specify: _____ Don't know Z	

SECTION 9: KNOWLEDGE ON HANDWASHING LINKED TO CHILD FEEDING

NO.	QUESTIONS AND FILTERS	CODING CATEGORIES	SKIP
	Now we would like to ask some questions about your hand washing practice		
901	When should one wash their hand with soap and water in a day? Anything else? RECORD ALL MENTIONED	After defecation A Before food preparation..... B After food preparation..... C Before feeding child..... D After feeding child..... E Before having meal F After having meal G Before prayer H When the hand is dirty..... I After cleaning a child J After coming back to home from outside K Others X Do not know Z	
903	Have you heard of Tippy Tap?	Yes 1 No 2	→1001
904	Did you ever install any Tippy Tap?	Yes 1 No 2	→1001
908	Where did you install it?	Near toilet..... 1 Near cooking place..... 2 Near eating place 3 Others 4	
909	Did you find it useful?	Yes 1 No 2	

SECTION 10: SOURCE OF INFORMATION ON MATERNAL NUTRITION, BREASTFEEDING, COMPLEMENTARY FEEDING AND HAND WASHING

NO.	QUESTIONS AND FILTERS	CODING CATEGORIES	SKIP
	Now we would like to ask some questions about the source on maternal nutrition, breastfeeding and complementary feeding and hand washing		
1001	Did any CNP visit your household in the last 3 months for discussing maternal and child nutrition?	Yes..... 1 No 2	→1004
1002	Did s/he show any nutrition material using a laptop or tablet?	Yes..... 1 No 2	
1003	What did s/he discuss? Anything else?	Breastfeeding (Initiation, exclusive BF, positioning, attachment) A	

	RECORD ALL MENTIONED.	Complementary feeding (Introduction, Frequency, Type, Quantity) B Hand washing C Vaccination D Nutrition and rest during pregnancy..... E Other..... X (Specify) Don't know Z	
1004	Did you attend any courtyard meeting in the past three months?	Yes..... 1 No..... 2	→1007
1005	What was being discussed there? Anything else? RECORD ALL MENTIONED.	Breastfeeding (Initiation, exclusive BF, positioning, attachment) A Complementary feeding (Introduction, Frequency, Type, Quantity) B Hand washing C Vaccination D Nutrition and rest during pregnancy..... E Other..... X (Specify) Don't know Z	
1006	Who organized the courtyard meeting? Anybody else? RECORD ALL MENTIONED.	CNP A Supervisor B FWA..... C HA..... D Other NGO worker E CNSG members F Other..... X (Specify) Don't know Z	
1007	Did you attend any nutrition day events organized by INCA/Caritas?	Yes..... 1 No..... 2	→1009
1008	What was being discussed there? Anything else?	Breastfeeding (Initiation, exclusive BF, positioning, attachment) A

FIND THE MANAGER, THE PERSON IN-CHARGE OF THE FACILITY, OR THE MOST SENIOR HEALTH WORKER RESPONSIBLE FOR CLIENT SERVICES WHO IS PRESENT AT THE FACILITY. READ THE FOLLOWING GREETING:

Goodday!

My name is _____. We are here on behalf of the MEASURE Evaluation conducting a survey of health facilities to assist the INCA project knowing more about nutrition services in the area. icddr, b is responsible to monitor the survey activities.

INCA project is implementing in 11 selected Upazilas under districts of Bhola, Laxmipur and Noakhali with the aims to address the high levels of stunting and malnutrition and to increase the knowledge, attitude, and practices of pregnant and mother with U2 children about health, and nutrition related issues.

The project is funded by USAID, Bangladesh and will be led by NGO Caritas Bangladesh. INGO UP will provide technical support.

Your facility was selected to participate in this study. We will be asking you questions about various nutrition services. Information collected about your facility during this study may be used by MEASURE Evaluation, USAID/Bangladesh, Caritas Bangladesh and United Purpose, organizations supporting services in your facility, and researchers, for planning service improvement or for conducting further studies of nutritional services.

Neither your name nor the names of any other health workers who participate in this study will be included in the data set or in any report; however, there is a small chance that any of these respondents may be identified later. Still, we are asking for your help in order to collect this information.

You may refuse to answer any question or choose to stop the interview at anytime. However, we hope you will answer the questions, which will benefit the services you provide and the nation.

If there are questions for which someone else is the most appropriate person to provide the information, we would appreciate if you introduce us to that person to help us collect that information.

At this point, do you have any questions about the study? Do I have your agreement to proceed?

No.	Question and Filters	Response	Skip
	May I begin the interview?	Yes 1 No 2	Sign below and skip to A01 End of Interview

INTERVIEWER'S SIGNATURE INDICATING CONSENT OBTAINED _____
(DAY) (MONTH) (YEAR)

A. GENERAL HEALTH FACILITY INFORMATION

To be answered by the health facility manager or his/her appointee(s). Circle the coding corresponding to the correct/observed response. Observe and verify records accordingly.

No.	Question and Filters	Response	Skip
A01	Start Time	Hour..... □□ Minute..... □□	
A02	When did this facility start providing services?	Month..... □□ Year..... □□□□	
A03	Does the health facility offer nutrition services?	Yes 1 No 2 →	B01
A04	Does the health facility have staff in charge of nutrition?	Yes 1 No 2 →	B01
A05	What is the cadre of the staff in charge of nutrition services in the health facility?	Cadre _____ (Specify)	

B. HUMAN RESOURCES TRAINED IN STANDARD IN-SERVICE SHORT COURSES IN NUTRITION AND QUALITY IMPROVEMENT (QI)

To be answered by the health facility manager or the person in charge of personnel at the health facility. Please ask respective person (health facility manager/the person in charge of personnel at the health facility) about the number of available health workers at present and number of health workers have got training on IMAM, IYCF, NACS, BFHI, GMP and QI in the last two years. Write the correct number corresponding to the responses.

No.	Cadre of Health Workers	No. available at Facility	No. Trained in each of the following in the last two years*					
			IMAM	IYCF	NACS	BFHI	GMP	QI
B01	Medical officers							
B02	Clinical officers							
B03	Nurses							
B04	Midwives							
B05	Nursing assistants							
B06	HA							

B07	FWA							
B08	CHCP							
B09	SACMO							
B10	FWV							
B11	Paramedic							
B12	Community Service Provider (CSP)							

- * IMAM = Integrated Management of Acute Malnutrition
- YCF = Infant and Young Child Feeding
- NACS= Nutrition Assessment, Counselling, and Support
- BFHI = Baby-Friendly Hospital Initiative
- GMP = Growth Monitoring and Promotion
- QI = Quality Improvement

C. PROVISION OF SERVICES

To be answered by health facility manager or his/her appointee(s). Circle the coding corresponding to the correct/observed response.

Does this health facility currently offering the following services?			
No.	Questions	Responses	Comments
C01	ANC	Yes..... 1 No 2	
CO2	Normal delivery	Yes..... 1 No 2	
CO3	Caesarean section	Yes..... 1 No 2	
CO4	PNC	Yes..... 1 No 2	
CO5	Growth Monitoring	Yes..... 1 No 2	
CO6	Child vaccination	Yes..... 1 No 2	
	Family planning		
CO7	Short acting methods(Oral pill, condom etc)	Yes..... 1 No 2	

	Long acting or permanent methods		
CO8	NSV	Yes..... 1 No 2	
CO9	FS	Yes..... 1 No 2	
C10	Implant	Yes..... 1 No 2	
C11	IUD	Yes..... 1 No 2	

D. Provision of Nutrition Services

To be answered by nutrition service providers. Indicate whether the following nutrition services are being provided at this health facility. Observe and verify with records as routinely required where applicable.

No.	Services	Whether the following services are available in this health facility	If yes, please write the number of cases for whom services were provided in the month of (2 months before the survey)	Remarks
Nutrition assessment				
D01	Taking mid-upper arm circumference (MUAC)	Yes.....1 → No2 ↴		
D02	Taking height/length	Yes.....1 → No2 ↴		
D03	Taking weight	Yes.....1 → No2 ↴		
D04	Plotting of the child health card	Yes.....1 → No2 ↴		
D05	Interpretation of growth curves to the mother	Yes.....1 → No2 ↴		
D06	Categorization of nutrition status	Yes.....1 → No2 ↴		
Nutrition education, counseling				
D07	Infant and young child feeding counseling	Yes.....1 → No2 ↴		
D08	Maternal nutrition counseling	Yes.....1 → No2 ↴		
D09	Counseling for malnourished clients	Yes.....1 → No2 ↴		
Micronutrient supplementation				
D10	Vitamin A supplementation	Yes.....1 → No2 ↴		
D11	Iron-folic acid supplementation	Yes.....1 →		

		No2	
D12	Calcium Tablet supplementation	Yes.....1 No2	
D13	Micronutrient sachet supplementation	Yes.....1 No2	
Other services			
D14	Mebendazole/Albendazole tablet	Yes.....1 No2	
D15	Zinc tablet/syruf	Yes.....1 No2	
D16	Referral of malnourished patients for further management/support	Yes.....1 No2	

E. COMMUNITY LINKAGES

To be answered by health facility manager or his/her appointee(s). Circle the coding corresponding to the correct/observed response.

No.	Question and Filter	Response	Skip
E01	Does this facility have referral system?	Yes 1 No..... 2	

F. Materials and Supplies

To be answered by health facility manager or his/her appointee(s). For this section, circle the coding corresponding to the correct/observed response. The assessor should verify availability. (Please circle the correct response before confirming the availability of the materials/supplies by observation.)

No.	Question and Filter	Response	Skip
	Dose the facility has the following guidelines/guides/cards/charts/ brochures, flyers, or posters /standards ¹		
F4	Management of Acute Malnutrition (MAM) Guidelines	Yes 1 No..... 2	
F5	Maternal Nutrition Guidelines	Yes 1 No..... 2	

F6	Comprehensive Micronutrient Guidelines	Yes..... 1 No..... 2	
F7	Growth Monitoring and Promotion Guide	Yes..... 1 No..... 2	
F10	Infant and Young Child Feeding Policy Guidelines	Yes..... 1 No..... 2	
Counseling cards/job aids (to be answered by health workers providing nutrition services)			
F13	Infant and Young Child Feeding National Counseling Cards for Health Workers	Yes..... 1 No..... 2	
Verify whether nutrition education materials for clients (brochures, flyers, or posters) are available on the topics listed below.			
F33	Infant and young child feeding	Yes..... 1 No..... 2	
F34	Micronutrient deficiencies (iron, vitamin A, iodine, and zinc)	Yes..... 1 No..... 2	
F35	Child immunization schedule	Yes..... 1 No..... 2	
F36	General nutrition (e.g., food groups, balanced diet)	Yes..... 1 No..... 2	
F38	Water, sanitation, and hygiene	Yes..... 1 No..... 2	
F39	Maternal nutrition (nutrition in pregnancy and lactation)	Yes..... 1 No..... 2	

Nutrition status indicator reference charts/growth monitoring and promotion charts			
F40	BMI-for-age z-score chart for children from 5–18 years (coloured)	Yes..... 1 No..... 2	
F41	BMI cut-offs for adults	Yes..... 1 No..... 2	
F42	Weight-for-height z-score tables for children less than 5 years	Yes..... 1 No..... 2	
F43	MUAC-for-age tables	Yes..... 1 No..... 2	
F44	Weight-for-age tables/child health growth charts	Yes..... 1 No..... 2	
F45	Height-for-age tables	Yes..... 1	

		No 2	
F46	Mother-child passport/child health card available	Yes 1 No 2	

G. Facility Nutrition Equipment

To be answered by nutrition service providers and observation to be completed by the assessor. Write the number if the item is available and '0' if the item is not available. Note that cells highlighted in grey should not be filled in. The assessor should verify availability of equipment.

No	Equipments	Total Number (specify)	Number with working condition	Remarks
G01	Adult weighing scales available	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
G03	Baby weighing scales available ²	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
G05	Child weighing scales available ³	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
G07	Observe for calibration of weighing scales before weighing	Yes 1 No 2		
G10	Infantometers (infant length meter available)	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
G12	Number of height tapes/length/height boards available	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	

No	Equipments	Total Number (specify)	Number with working order	Remarks
G14	Number of MUAC tapes (colour-coded) for specific age groups available and in good working condition (two packets for each age group)			
	6 to 59 months	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
	5 < 10 years	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
	10 < 15 years	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
	15 < 18 years	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
	Adults 18 years and above	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	

	Pregnant and lactating women with infants less than 6 months	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
G15	Number of blood pressure machines available	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	
G16	Number of glucometers with matching glucostix available	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	No. <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>	

H. ORIENTATION SESSIONS

To be answered by health facility manager or his/her appointee(s). Circle the coding corresponding to the correct/observed response. (Only for Intervention areas)

No	Questions	Response	Comments
H01	Does any orientation session from INCA project is organized for MA/FWV/FWA/CHCP in this facility?	Yes1 No2 → I01	
H02	How many session was organized in last 3 months	Number <input type="text"/> <input type="text"/>	

I. COMMUNITY SUPPORT GROUP (CNSG) (Only for CC in Intervention areas)

I01	Are you aware of any community nutrition support group (CNSG) organized by INCA/Caritas in your working areas?	Yes1 No2 → I04	
I02	Does any training /orientation session on nutrition organized by INCA project for the members of CNSG?	Yes1 No2	
I03	Is there any meeting held for CNSG in the past three months in your area?	Yes1 No2	
I04	End Time	Hour <input type="text"/> <input type="text"/> Minute <input type="text"/> <input type="text"/>

Good day!

My name is _____. We are here on behalf of MEASURE Evaluation conducting a study to assist the USAID INCA Team in knowing more about Nutrition services in the INCA locations. icddr,b is responsible to monitor the survey activities

INCA project is implementing in 11 selected Upazilas under districts of Bhola, Laxmipur and Noakhali with the aims to address the high levels of stunting and malnutrition and to increase the knowledge, attitude, and practices of pregnant and mother with U2 children about health, and nutrition related issues.

The project is funded by USAID, Bangladesh and will be led by NGO Caritas Bangladesh. INGO UP will provide technical support.

Now, I would like to ask you some questions regarding INCA project. Hope you will co-operate us.

We will not going to provide any incentives for this interview. We are ensuring you that, there is no risk to participate in this survey. Neither your name nor that of any other health worker respondents participating in this study will be included in the dataset or in any report; however, there is a small chance that any of the respondents may be identified later. Still, we are asking for your help to ensure that the information we collect is accurate.

You may refuse to answer any question or choose to stop the interview at any time. However, we hope you will collaborate with the study. Do you have any questions about the study? Do I have your agreement to proceed?
